Hi Jack, etc.......
Well you were right on it's me, but you
will be wrong on the future.It was a very
feeble attempt, and I never was any good
at those types of things. I don't own a
modem, strictly DSL, so I can't go calling
in on other accounts that I don't have.
No, I'm sorry it is the first, again, I'm not
very good this anonymity crap. I haven't
had any reason to hide :^)

The Landshark
--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream

1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Hi Doug,
Is that all you ever think about? Gay sex,
gay intercourse etc, etc. You really need to go
out more often, maybe you could get rid of those
feelings.

The Landshark

I was in Dayton last weekend.

And I'll be in Southfield this weekend.

Just ask any of the 'Outcast' bikers working security where to find me.

Or try 4453 14th street.

Wear black (no colors), don't act scared, and don't try to be an urban Rambo,
and you will be quite safe and have a great time.

Hi Doug,
Actually she was quite amused by what
someone wrote. She knows computers better
than I so she was laughing about it, considering
that anyone could make up hotmail names, and
post from that account. I didn't even notice it
because of the filters I put in, till I saw it in a
reply on a different post, so considering the source,
it doesn't phase me one bit Thank you!

From: The Landshark <Landshark@TheLandshark.Com>
Message-ID: <jriP6.1000$jC2.179018@news.pacbell.net>
Source record: 83238

Yup, wonderful work, I still would
like to see the full header. I know I
didn't post that, so if it did come from
me, I would sure like to know.
Again, it's probably a forge, and I really
couldn't care.

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Would an owner of a reputable shop be illiterate like him?

google.com, knock yourself out.

Could someone repost this info so it will get past Mr. Halverson's
killfile?

Hello people,

I have a question reguarding the volume knob on the Uniden Washington. Every time I turn it on, it crackles like all hell. Thats the only time it does it is right when i turn it on. Do I just need to replace the pot. or is there more to it? Any help would be appreciated.

Thanks,
Brian

2897. OT: Class of 2004

Newsgroup: rec.radio.cb
Date: 2001-05-25 02:42:26 UTC
From: WebDoc <arcweb@bnnorth.net>
Message-ID: <3B0DC692.B43AD5E4@bnnorth.net>
Source record: 83312

Just in case you weren't feeling too old today, this will certainly change things.

Each year the staff at Beloit College in Wisconsin puts together a list to try to give the Faculty a sense of the mindset of this year's incoming freshman.

Here is this year's list:
The people who are starting college this fall across the nation were born in 1982.

They have no meaningful recollection of the Reagan Era and probably did not know he had ever been shot.

They were prepubescent when the Persian Gulf War was waged.

Black Monday, 1987 is as significant to them as the Great Depression.

There has been only one Pope.

They were 11 when the Soviet Union broke apart and do not remember the Cold War.

They have never feared a nuclear war.

They are too young to remember the space shuttle blowing up.

Tianamen Square means nothing to them.

Bottle caps have always been screw off and plastic.

Atari predates them, as do vinyl albums.

The expression "You sound like a broken record" means nothing to them.

They have never owned a record player.

They have likely never played Pac Man and have never heard of Pong.

They may have never heard of an 8 track. The Compact Disc was introduced when they were 1 year old.

As far as they know, stamps have always cost about 33 cents.

They have always had an answering machine.

Most have never seen a TV set with only 13 channels, nor have they seen a
black and white TV.

They have always had cable.

There have always been VCRs, but they have no idea what BETA was.

They cannot fathom not having a remote control.

They don't know what a cloth baby diaper is, or know about the "Help me, I've
fallen and I can't get up" commercial.

Feeling old Yet? There's more:

They were born the year that Walkman was introduced by Sony.

Roller skating has always meant inline for them.

Jay Leno has always been on the Tonight Show.

They have no idea when or why Jordache jeans were cool.

Popcorn has always been cooked in the microwave.

They have never seen Larry Bird play.

They never took a swim and thought about Jaws.

The Vietnam War is as ancient history to them as WWI, WWI, Korea and the
Civil War.

They have no idea that Americans were ever held hostage in Iran.

They can't imagine what hard contact lenses are.

They don't know who Mork was or where he was from.

They never heard: "Where's the beef?", "I'd walk a mile for a Camel," or "De
plane, de plane!".

They do not care who shot J.R. and have no idea who J.R. was.

The Titanic was found? They thought we always knew where it was.

Michael Jackson has always been white.

Kansas, Chicago, Boston, America, and Alabama are places, not rock
bands.

McDonalds never came in Styrofoam containers.

There has always been MTV.

They don't have a clue how to use a typewriter.

Do you feel old yet?

Pass this on to the other old fogies. But don't send it back to me, I
feel
old enough.

2898. Who is?????????

I'll ask this again, what the heck is a "plank"? What does lumber have
to do with politics, radios, and life?

Ok if the exsperts are still reading the mail hears a question for old times sakes. Please tell me if I am correct by my observations. When building 32, 64 or bigger does the resistance in the circuit become close to zero because of all of the parallel components? When connecting s analyzer it appears that the resistance is 0 and the reactance is at 0. What also happens is it burns up the input relay contacts. What would be the best way to bring up the input impedance to 50 ohms?

Well, the Landshark has always had a very inflammatory presence out here. It's been going on for at least two years now. He fights with everyone who even hints at opposing him in any way. It's a shame... because I think he is
somewhat knowledgable in many aspects of this hobby. I keep hoping he will grow up and rise to his full potential...

Hi Jack,
Yes your right, they were back then, I do not know
anything about this S3shark person, nor do I care.
As far as the ones from those other newsgroups, well
I know I didn't do it! So I don't care if they were forged
or not, but I didn't do it. If someone else forged it, so be
it, if someone else used my terminal, so be it, but I know,
as well as anyone that knows me personally, that I never have, nor will I do
such a thing. As far as the "oil" thing,
guess I should've used the term "fishing" instead.
If you look at those posts, I should be using more
"colorful metaphors" as some have said, and why was
I being so courteous back then, when everyone says I was
always using foul language. But it doesn't matter to
you three, all that matters is that you have something to
talk about, other than yourselves. (last statement not
directed at you Jack)
I would really like to see the header though, because
I know I didn't post it, so I would be curious where it came
from. If it did come from my terminal, well then I'll have
the posting time and date, wouldn't I.

The Landshark
--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Well you know Mopar,
I don't really care, I have used filters for the past
three days for sparky, and a couple others, so this
whole crap about me is just that, crap. But alas, since
they can't face when their wrong, they resort to finding
whatever they can. I don't care what anyone thinks
about me, because I don't know you people, nor will
I ever meet most of you, but the ones that have been
here for years no the truth, no matter what somebody
post.

Ciao,

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

The exsperts say: The best way to bring up your impedance is to learn
what you are doing before you start messing around with things you
know nothing about.

Hi Doug,
I said show me the header,
that's all. If it shows that it came from my
terminal, then I'll have a time and date that
it took place. Pretty simple, even for you Doug.
If I was trying to do those thing, why did it only
happen, 3 or 5 times, I don't know, I didn't make
those posts. You can understand, that if I leave a
terminal up, without password in affect, anybody, like
you could go on line and start those post, walk away
and unless I saved my outgoing mail, I wouldn't know it.
But you three keep dreaming about it, you have nothing
better to do.

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Hi Again Doug,
Why don't you please post the entire header?
I'll tell you what, I'll stop posting if you can
post the entire header, how's that for a deal?
You can't lose, Right? Again, and for the last
time I didn't post that, It is either a forge or
someone that got on my terminal without my
knowledge, sorry to disappoint you.
But why are you responding to your own
post?

I'll tell you Joey, he made the mistake
of posting from work, which with most companies
is a big no-no, but you in you gutless wisdom
don't know how much info we're losing by not
having him out here to answer Tech questions.
Fortunately For Toll & I & others, we're
sys. admin., and nobody looks over our shoulders.

2915. Definition of "the landshark" *** WARNING *** mature content

Newsgroup: rec.radio.cb
Date: 2001-05-25 05:16:53 UTC
From: sparky@cet.com
Message-ID: <3b0de9d4.4707292@news.cet.com>
Source record: 83316

Quoted from the website:

http://www.omen.net.au/~sfingaz/euphemisms.html

==========

the landshark
• The woman braces herself facing a wall, naked, hands against the wall, legs spread, bent over so that her ass is lusciously jutting out. (hint: She might want to wear a biking helmet and some Rollerblading wrist guards to avoid serious injury.) Next, the guy also naked as well as stiff cocked, walks to the opposite end of the room, places his palms together and raises them above his head, (thus imitating the dorsal fin of a shark) and begins chanting the theme to JAWS. When given some predetermined signal, the guy sprints toward the girl at full speed with his pelvis-out, fin protruding, and rams her dead square in the ass.

2916. RCI2950 cpu reset problem?

Newsgroup: rec.radio.cb
Date: 2001-05-25 05:53:55 UTC
From: The Sabo's <tahoegym@pacbell.net>
Message-ID: <3B0DF373.235@pacbell.net>
Source record: 83321

My 2950 goes wacko when I turn it off.

When I turn it back on the frequency display shows wierd numbers from 20 mhz to 39 mhz, all the indicators come on differenty like the and nb rbeep split and so on.

If I mess with it enough, like turning the power supply off while the radio is still on and switch the radio on and off I can usually get it to work again but I'm afraid it's about to go out all together.

Any ideas or experiences like this?

Thanks

BushWacker!

So as you have said in a post previous to me "Don't
try to worm your way out of this one" You posted it, so
as with everything else you have posted (You say) It must
be and is true.
I guess I can say, Hah, I was just kidding on those previous
posts,
don't believe me, well if that's the case,
I don't believe you here.

Hmm.... that sounds mighty familiar ....

...... OH YEAH!!!

By golly I just -knew- I heard all that somewhere before.

You know, shark, I really don't care who you are, who you do, or what kitchen utensils you need to wash afterwards. All I care about is the way you and others think that CB radio is something that you can abuse because nobody cares. Well, people do care. Some of us care enough to put our names on the line and expose radio pirates for what they really are -- antisocial, lying, hypocritical deviants.

You built your own house, shark, now you have to live in it. (Hmmm.... didn't I read that in one of your posts as well?) But if you should ever have a change of values, I'm sure that any of your helpful opinions regarding CB radio will be read with an open mind by most people here, including me.

There is no such thing as a brief explanation on the practical
application of the dynamic properties and interactions of impedance,
resistance, and reactance. You need to read the whole chapter. This is
why the FCC requires some practical knowledge of RF electronics in
order to obtain an amateur license.

Put a bunch of 50 ohm resistors in series then connect them to ground. This
will give you multi-phasic voltage on the bias of the septode. Be sure to
use exactly 6.222 feet of coax.

It's probably a dead battery. S/N's starting with a 3 or lower are
the oldest version and have an on-board memory battery.

Really? Is that why the question and answer pool is available?

One of the things wrong with Amateur Radio today is that no practical
knowledge of electronic theory is necessary to get an Amateur license,
even the Extra Class. Rote memorization is sufficient.

It could be due to a number of things. The first thing I would try is a
new power supply - marginal voltage/current can cause the symptoms you
list.

2932. THINGS EVERY CB'ER SHOULD KNOW

Newsgroup: rec.radio.cb
Date: 2001-05-25 07:34:40 UTC
From: G SEVEN <superiorwavelength@prodigy.net>
Message-ID: <9el1mu$9qac$1@newssvr06-en0.news.prodigy.com>
Source record: 83343

THINGS EVERY CB'ER SHOULD KNOW
Every industry has its bottom dwellers. We cannot protect you from them. Consumers who make decisions based strictly on price, or on what someone says instead of what they can do, will often fall prey to the bottom dwellers.
Beware of information from "experts" (real or self-proclaimed). There is antenna theory and there is antenna reality. We have yet to see a vehicle that simulates a lab. While theory is a good starting place...experience is the only place to end up. The best book on theory will produce the worst antenna you could own.
Some "experts" may "claim" 5/8 wave mobile antennas are not possible because they would need to be 23 feet high. They are wrong! Physical length and ground wave performance are not the same. If you ever hear someone make that claim, ask them how a handheld CB can have a 1/4 wave antenna 8 inches long and 1/4 wave mobile antennas from 12-60 inches long in spite of the fact that a physical 1/4 wave is 108 inches.
Never key up or attempt to operate your CB without a working antenna or "dummy load" (non-radiating antenna simulating device) connected to the radios antenna jack, unless you have extra money to buy another radio.
All mobile and base transmitting antennas need counter-poise, more commonly called ground plane. The antenna is the reactive unit, the ground plane is the reflective unit. Neither is more important than the other. In mobile installations with standard antenna systems, the vehicle metal (body, frame, etc.) acts as the ground plane. In "no-ground-plane" systems, the coax shield is used for counterpoise.
Most, but not all, manufacturers pre-tune their mobile antennas on a test bench. To protect your radio's circuitry and achieve optimum performance, mobile transmitting antennas (CB, cell phone, amateur, etc.) need to be tuned on the vehicle.
Before transmitting, you should check your antenna system for shorts or opens. If you have continuity between the center pin of the connector and the outer threaded housing, you may have a short. Don't transmit! If you do not find continuity between the center pin of the coax and the antenna base, you have an open. Fix it. (See "Testing Continuity") Exceptions: Some base loaded antennas use a center tap design and there will be continuity from ground to center conductor. Also, Firestik "No Ground Plane" antenna kits will have coaxial center pin to ground continuity.
SWR that pegs the needle on all channels almost always indicates a short in your antenna system. Do not attempt to tune the antenna until the short is fixed. Operating with high SWR will probably damage your CB's internal circuits.
Make sure that the antenna you are using is the right antenna for your application. Don't use a TV antenna or an AM/FM antenna for your CB. Do not operate your CB without an antenna or dummy load.

Transmitting antennas are sensitive to objects in their "near field of radiation." Tune your antennas in an open area. Never tune inside or next to a building, near or under trees, near or under power lines, and never with a person holding or standing next to the antenna. Try to simulate normal operating conditions.

If you mount two or more antennas close to each other, you will alter the transmission patterns of each one. The affect may be either positive or negative. We recommend that a minimum of 12" exist between your CB antenna and other types of antennas.

Your radio cannot tell one component from another. As far as the radio is concerned, the coax, stud mount, mounting bracket, antenna and vehicle is ONE unit. Don't be too quick to fault your antenna until you are sure that all of the other components have been given equal consideration.

Of all antennas returned to Firestik for warranty service, 75% show no signs of being tuned to the vehicle. All antennas should be checked prior to use. Most will require some adjustment. Less than 3% of all returned antennas have actual performance causing problems. Of those, half of the problems are user or installer created. High SWR and other performance problems are 20 times more likely to be caused by bad coax, bad connections, shorted mounts, poor installation location or faulty test meters.

In almost every instance, once you get the same SWR reading on channels 1 and 40, further antenna tuning will not improve the readings. If the SWR is still over 2:1, you have other problems to conquer. Exception: There are rare occasions when the ground plane is so small or large that the system is way out of phase (especially with high-performance antennas). If you have high SWR on all channels and have confirmed that you have no opens or shorts in the feedline, try making a small tuning adjustment in the antenna. There are times when the SWR will drop equally across all channels under unusual ground plane conditions. If you find this to be the case, carefully adjust the antenna.

SWR that is high on all channels (over 2:1 but not pegging the needle) after the antenna has been tuned normally indicates a ground plane or coax cable problem.

The doors, mirrors, spare tire racks, luggage racks, etc. on many vehicles are insulated from a good ground with nylon or rubber bushings. This also stands true for fiberglass vehicles. Make sure that your antenna mount is grounded, even if it entails running a ground wire to the vehicle chassis. Bad hard ground at the mount generally equates to less than optimum performance. Exception: No ground plane antenna kits do not require a grounded mount.

If you are hearing whining noises from your radio while your vehicle is running, it is probably due to "dirty power" being supplied to the radio. Under dash power may be more convenient, but the "cleanest" power will be found by running the radio's power leads straight to the battery.

You can never buy coax cable that is too good for your system. Never compromise quality for cost when purchasing coax. Your best bet is to stick with coax that has a stranded center conductor and 90% or higher shielding.

Most manufacturers of high performance antennas recommend a specific length of coax cable. If your antenna manufacturer suggests a specific length, give priority to that recommendation.

If your ground plane is good, your mount grounded and, your antenna favorably located, coax length rarely becomes an issue. But, if one or more mismatches occur, you may find high SWR. This can often be corrected by using 18 feet lengths of high quality coax.
Excess coax between your radio and antenna mount should never be wound into a circular coil of less than 12" in diameter. Doing so can cause system problems. Your best option for handling excess coax is to serpentine the cable into a 12 to 18 inch yarn-like skein. Secure the skein in the center with a wire tie and tuck it away.
Single antenna installations require coax with approximately 50 ohm's of resistance (RG-58/U, RG-58 A/U or RG-8X). Dual antenna installations require the use of 72 ohm cable (RG-59/U or RG-59 A/U).
Coaxial cables with foam (polyfoam) center conductor insulation should be your last choice for use on mobile (vehicle) installations. Even though it will work initially, it has limited life and does not stand up to the conditions encountered in the mobile environment. Choose coax with polyvinyl insulation when doing mobile installs.
Coax cables should never be cut and spliced together like common electrical wire. Line losses will occur.
Coaxial cable with holes in the outer insulation, severe bends, or door, trunk or hood caused pinches will cause performance problems. Treat your coax with care.
If you live in an area where rain and/or sleet is common, wipe your antenna down with a rag that has been coated with WD-40, Armor-All, Pledge, light oil, etc. This trick prevents ice build up that can overload and cause your antenna to break. In an emergency use butter, cooking oil or anything else that will repel water.
When tuning your antenna(s), make sure that you do so with the vehicle doors, hood and trunk closed. If left open, they can cause inaccurate SWR readings. Try to simulate actual operating conditions.
Mobile antennas, for best performance, should have no less than 60% of their overall length above the vehicles roof line. For co-phased antennas to perform optimally, the space between the top 60% of the two antennas needs to be unobstructed.
Remember, all transmitting antennas need ground plane (counterpoise). Base antennas, much like "no ground plane" antennas, build it in. Do not use mobile antennas for base station applications unless you know how to build your own ground plane.
If you are installing a single antenna on one side or the other of your vehicle, best on-the-road performance will be realized if the antenna is on the passenger side of the vehicle.
Co-phased (dual) antenna installations create a radiation pattern that favors communication directly in front and back of the vehicle. This is why co-phase systems are popular with people who do a lot of highway driving.
Co-phase antennas must be center or top loaded. Top loaded antennas are the best.
Some people believe that co-phased antennas must be separated by a minimum of nine (9) feet. We have successfully used co-phase antenna systems with spacing as little as four (4) feet. Space alters the pattern and not always negatively. Each vehicle will be different.

Co-phase antennas can improve performance on vehicles that lack good ground plane characteristics (fiberglass motorhomes, trucks, etc.). Instead of using available metal to reflect the radiated energy, the antennas use each others field.
When tuning co-phased antennas (dual), it is best to adjust both antennas an equal amount to maintain equality in their individual resonant frequency.
On a co-phase system, if you try to tune each antenna independently using RG-58 type coax and then connect them to the co-phasing harness, you will almost always find that they will appear electrically short as a set. We recommend that you first assemble the entire system. Take all measurements and make all adjustments with both antennas in place.
If you are experiencing SWR that is high across the entire band and have eliminated shorts, opens, groundless mounts and coax as potential problems, suspect lack of ground plane. Try adding a spring or quick disconnect to the antenna base. In some cases, the repositioning of the antenna relevant to available ground plane will solve the problem.
One of the greatest benefits of the FS series (patented tunable tip) antenna is noted when there is lack of available ground plane. If the tuning screw reaches its "maximum out" position before satisfactory SWR is realized, a common 1/4-20 threaded bolt or screw of a longer length can be used to replace the supplied tuning screw. If the vinyl cap is too short to remain in place, the user can disregard it or clip a hole in the top for the longer screw to pass through.
In rare instances, like antennas mounted in the middle of a metal van roof, excess ground plane can cause a problem. This usually shows up as high SWR across the band. In these cases, a tunable tip antenna may not be the best choice. The reason being, the antenna is too long and the tunable tip cannot adjust down far enough (see line 40). If you suspect this, an antenna that wire can be removed from will usually fit the bill (i.e. KW or RP series).
There may be situations when a tunable tip will bottom out before optimum tuning is achieved. If this happens, try removing the knurled jam nut and finger tighten the tuning screw against the o-ring. If still too long, remove the tuning screw altogether. If total removal causes the antenna to go short, cut the tuning screw in half and re-insert it into the tuning extender and re-test. The following items on the FS Series "tunable tip" antennas, when removed, will have an effect on SWR (in order from least effect to most effect). O-ring, jam nut, tuning screw mass (cutting off length), vinyl cap, tuning screw complete.
The vinyl cap on any "tunable tip" Firestik antennas is optional. However, your antenna needs to be tuned as it will be used . . . with or without the tip.
Magnetic mounts should be used in temporary situations only. If you leave them in the same spot for a long period, the paint will not age like that of the uncovered areas and/or moisture will be trapped between the mount and vehicle causing rust or discoloration. Periodically lift the magnet and gently clean off the underside of the magnet and the vehicle surface.
It is a bad idea to use magnetic mounts and amplifiers together. Magnetic mounts rely on capacitance grounding. This situation can literally cause the paint under the mount to bubble or discolor due to excessive heat build up.
On wire-wound antennas that require wire removal for tuning purposes, best

overall performance will be achieved by keeping the loose end of the wire pressed down tightly against the wire coil. If you use power amplification on top loaded antennas and do not process the end of the wire load so it can dissipate its heat into other adjacent coils, you can melt the tip of the antenna.
Generally speaking, center loaded antennas perform better than base loaded antennas, and top loaded antennas perform better than all. For any given antenna design (base, center or top loaded), the taller the antenna the better. With length comes a wider bandwidth (lower SWR over more channels), more power handling capability and overall performance increases.
When ultimate mobile performance is desired, function should be given precedence over mounting location convenience and appearance.
Don't confuse SWR with overall performance. You should seek SWR of 2:1 or lower on channel 1 and 40, but keep in mind that best performance may not be found at the lowest SWR readings. For the most part, if you get your SWR below 2:1, on both ends of the band, don't be overly concerned about using meter tricking procedures that bleed off energy.
The SWR meters built into CB radios are okay for general readings, but are rarely sensitive and/or accurate enough for fine tuning of antennas. Use them mostly to indicate serious high SWR problems only.
Firestik has tested literally hundreds of SWR meters. A large percentage of these have shown to be off by 0.3 to 0.7 when compared to a piece of certified equipment. There is no standard among production meters. However, unless a unit is defective, most will indicate the most serious problems that you might encounter
Aside from cost, the type of wire used in or on antennas (copper, silver, aluminum, gold, tinned, etc.) has negligible effect on antenna performance. The antenna must be designed to resonate with the wire type and gauge chosen by the designer. However, larger wire gauges will normally increase the bandwidth and heat dissipation abilities of the antenna.
Copper is 55% better than aluminum, 27% better than gold and 578% better than tin insofar as conductivity is concerned. Silver will conduct AC/DC current less than 2.5% more efficiently than copper, but the cost to performance is generally unjustified and any gain, insofar as RF transmission is concerned, is negligible.
If devices other than an SWR meter are going to be used between the CB radio and antenna, always tune the antenna system first without that device in line. If SWR is high with the other device in line, you will know where the problem is.
In "no ground plane" systems, it is best to choose a system that terminates the coaxial ground at the radio end of the cable. These systems are far less reactive to cable routing errors and will almost always outperform systems that are terminated at the antenna base or antenna end of the coax.
Cables and antennas from standard & no-ground plane kits are not interchangeable. The "No Ground Plane" antennas from Firestik have a yellow band near the base.
Wire wound antennas with a plastic outer coating will greatly reduce audible RF static when compared to metal whip antennas.
If you leave your antenna on your vehicle permanently, remove the rubber o-ring that is found on the threaded base of some antennas. Tighten

permanent antennas with a wrench. Add a lock washer if you want.
If you use mirror mounts and often find yourself in areas with overhead obstructions, tighten the bolts just enough to keep the antenna vertical at highway speeds. If the antenna contacts something overhead, the mount will rotate on the mirror arm and protect your antenna.
If you use long antennas and find that they bend too far back at highway speeds, tilt them forward if possible. When under a wind load, they will end up in a relatively vertical position.
On antennas that are topped off with a vinyl tip, make sure that you take your SWR measurements with the tip in place. If you tune your antenna with the tip off and then reinstall the tip, your SWR will change.
Without advocating the use of power amplifiers or unauthorized channels, take note that the Firestik II tunable tip antennas have a fairly large metal tip that broadens the bandwidth and dissipates a considerable amount of heat.
It is illegal to use power amplifiers with CB radios. It is illegal to "tweak" the radios internal circuits to increase output power. The transmitter power of a legal, FCC certified CB radio is 4 watts AM.
If having one antenna for CB/AM/FM is appealing, use a CB antenna and a splitter that allows it to be connected to your AM/FM radio. Devices that let you use your AM/FM antenna for CB use will leave you disappointed.
On a budget? Buy a cheap radio and a good antenna. Aside from added bells and whistles, all CB's are FCC regulated to transmit no more than 4 watts of power. A good antenna on an inexpensive radio will almost always outperform a bad antenna on an expensive radio.
Beware of the wire wound mobile antennas mentioned in ads that claim them to be "full-wave" or "wave and a half". At best, you are being deceived by the misleading association of wire length to actual performance characteristics. Wire length, for all intents and purposes, is irrelevant. With "very" few exceptions, antennas must function as a 1/4 wave or 5/8 wave to be useful on mobile installations. For example, Firestik and Firestik II antennas between 2 foot and 5 foot have a radiation pattern similar to a 5/8 wave reference antenna. However, wire lengths range from 20 feet to 32 feet (0.6 to 0.9 of a full wave length). If wire length was relevant, each antenna would need 22.5 feet of wire.

For starters, impedance is the relationship between voltage, current
and phase. Disregarding phase for the moment, you can use Ohm's law to
determine DC impedance (E=IR). Just for the sake of argument that you
don't have any phasing problems. If your impedance is nearly zero then
your current is probably near maximum, and you will blow relays,
traces, transistors, and turn your box into a blue-smoke generator.

When you wire components parallel you can determine the total
resistance by using the product-over-sum method
(R1+R2+R3+...+Rn)/(R1*R2*R3*...*Rn). If the values of the components
are equal, you can just divide the resistance of one component by the
number of components.

Assuming a 64 pill squack-box, and knowing that the input and output
impedance of most of the common 'pills' is around 1 to 10 ohms
(usually with some capacitive reactance mixed in), the result is
nearly a dead short.

One of the most common methods to get around this problem is the use
of a splitter on the input and a combiner on the output. These are
nothing more than RF transformers with multiple windings. Their use is
a poor solution for the output, because everything that you put into
one winding comes out all the other windings, regardless of how they
are hooked up. Unless the circuit is designed to prevent this, each
transistor will be sinking some of the power transmitted by the other
transistors instead of sending it through the antenna. This requires
more cooling than necessary, i.e, more power, i.e, poor efficiency.

There is another problem with the splitter/combiner method, and that
is phase. If one winding is out of phase, the result is a toasted
pill. If half of them are out of phase, * poof *. But even if they are
just a little bit out of phase, that phase relationship will cause
harmonics to develop in the transformer because of the mixing ability
of the device. So as well as combining two or more signals, it will
also serve as a mixer. The results of mixing two frequencies are the
sum, the difference, and the two originals. Since the signals are the
same frequency, the difference and the two originals can be ignored

except for phase (it will play havoc with your power supply). The sum is, obviously, the second harmonic of the fundamental. Now you said you have 32 to 64 transistors?

Well, how about wiring the transistors in series. This works better. Series resistances only need to be added, the total capacitive reactance of the collectors is reduced (series capacitance uses product over sum), the output is a much higher impedance than 50 ohms with negligible reactance (using 32 to 64 transistors). The high output impedance means you can use an efficient pi output network with a reasonable Q, giving good harmonic rejection. The drawbacks are that you need a power supply that must provide a much higher voltage, and input splitter is still required, and bandwidth is reduced inversely to the Q of the output network.

I'm not a ham. And if anyone wants to drill me on insignificant details, first consider why for whom this post was written.

So I will. I are one

1. It has always been possible if not indeed likely that the newly-minted licensee would not have a clue about any practical application. Hell, I was 11 when I got my first one.

You can pass drivers license exams til hell freezes but you are not a driver until you get some serious brown stains in your shorts. To drive you need a license; it is a beginning point not a graduation certificate.

2. For any number of good reasons, different services approach things in different ways. The Amateur Service is multi-band, CB is not. So the antennas in use and the thinking behind them differ a lot. One is a primarily fixed approach, the other is predominantly mobile. With modern rigs there is not a lot of difference any more but they got there two different ways.

Asking any amateur, and this one for sure, about a 64 pill amp, is not likely to be productive. The biggest one I know of in the Amateur Service was a Ten-Tec and I think it was eight. It is also no longer made. So if we appear stupeed, it is a) because a license guarantees nada, and b) because we have never seen the beast or even its third cousin.

3. Design, operation, and troubleshooting are three distinct activities; it is not apparent here just which is being done. I don't want any of the jobs but if we are dealing with something known to have worked once, the standard divide-and-conquer approach makes as much sense as anything; make the thing work as a 4-pill and add to it until something breaks. For all you know here you are looking into 64 incinerated transistors which will indeed be harder than hell on input relays. Get techy only when necessary and do your visuals and resistance checks first; it does not take a First Phone to remove the dead skunk.

Start with the internal Lithium battery. They sometimes are difficult to locate. Many CB shops don't stock them, but they can obtain them (and install them) for you. You also can order direct from Ranger.

>Dick N&#65533;BK

I tend to take an engineering approach. The whole idea of using 64
transistors in the final of a wideband amp is just plain ludicrous. It
is akin to strapping a few thousand AAA batteries together to start
your car. And when someone that doesn't even understand impedance
starts messing around with the innards of RF equipment capable of
thousands of watts of...., hmmm,.... maybe I spoke too soon....

2943. Amplifier Pills?

What Pill would be best to replace the burned out ones in my Messenger m250?
Should I use the same ones or can
I upgrade?
Thanks

Of course the city of Farmington is next door to the city of Southfield.

DETROIT, MICHIGAN OFFICE: (DT)
James Bridgewatter, EIC (810) 471-5605
Federal Communications Commission
24897 Hathaway St.
Farmington Hills, MI 48335-1552
FAX (313) 471-0052

DETROIT EIC

Also from the FCC, word that forty-four year old James
Bridgewater, AA8JD has been named as the new Engineer in Charge of
the FCC's Detroit, Michigan field office. Bridgewater holds an
Extra class ham ticket along with both BSE and BSEE degrees from
Purdue University. He began his career with the FCC back in 1977.

The Radio Hall of Shame:
James A. Bridgewater

Not much is known about FCC Enforcement agent James Bridgewater, except that
he works out of the Detroit, Michigan FCC Field office and went on a bit of
a pirate-busting spree durng the year 2000. At least three stations in
Michigan and Ohio have been closed by his hand - he prefers to start soft
with warning letters but he also seems a bit tenacious.

One thing that might explain his animosity to microradio may be his interest
in amateur radio; as a licensed ham operator, Bridgewater has joined a club
that's not always the most unfriendly to those people who don't 'work for
the right' to get on the air. Then again, you can't broadcast on the ham
bands...

What is a real Nick? I can be anyone I want to
"Ahaha! Any second you are going to start to whine, "Nyah nyah nyah nyah
nyah nyah you can't do nuthin' nyuhnyuh, ahahah."

Wow Great response did it take you all day to think of that stupid
reply?

<It wasn't a repy. It was a predicted quote I elicit from you.>

"Good question. Be yourself and prove it."

I am myself, what do I need to prove to you? I don't need your approval
or acceptance who the hell are you

<Yes, you do, and someone who is way above you in all ways.>

The regular "regulars know exactly who I am.
"And that is supposed to mean something to me? Damn, son, you are
lacking severely."

You seem to keep asking the question so yes It must mean somethuing to
you.

<Only because you addressed me in some unknown alias and started making
outrageous radio claims which you can not back up.>

"If you are going to analogize, get it right. You change names like your
male nurse changes your attends."

Again Brilliant reply , where do you find em,?
    Which I can do daily if I like and if it upsets you
"Nothing here upsets me."

Oh I beg

<Why, of course you do, Daily. For my attention and grace.>

to differ, alot of stuff here upsets you. thats why you get so worked up

<Worked up? Ok, if you say so.>

over it and the rest of the NG cut you to pieces.
"Yes, I have that effect on cowards."

It would be kinda funny to go around telling everyone why your eating out of a straw, because some coward busted your jaw.

<Now I have reduced you to threats? And you still think I am not in control?>

"Again, you were the one who stuck your beak in and allded to an interlude of some type with Adair."

---------- Snapper head perhaps you have interludes with little boys

<Every post you guys make is queer related. What's that say about you?>

and have shit like that on your mind.

<Uh, better look again whose mind that stuff is coming from.>

I mentioned about a conversation

<No, you mentioned a PRIVATE whatever that took place with Adair. What did that have to do with the topic of the ten meter amplifier that allegedly does 110 watts and doesn't modulate?>

that may or may not have taken place in private, such as an e -mail, chat room as opposed to a public forum such as NG, or message board, But you with your gay inuendos like talking about gay men getting togther.

<Every single related innuendo has came from you and Adair. Then you appear out of nowhere and attacked me for slamming Adair for his rants and attacks and not staying related to topic? And we are not supposed to think you are the same as he? LMAO!>

Perhaps you and Landshark have gotten togther on occasion, he is an admitted homo, you just won't admit it.

<Your opinion is duly noted and equated properly.>

"You are out here because you and Adair share the same views and probems with yourselves."

Snapper head show me where my views and Doug's (who ever he may be) are the same.

<Uh, only you two consistently bring up queer acts on the radio ng and accuse whoever disagrees with you as being faggots. You alos ran to his defense when he was getting slammed for acting that way, and then you joined him in the exact manner. Hell, even the diehard legal cbers that disagree with freebanding and running power don't stoop to your level

when arguing their case.>

Your arguements of why I am here aren't even good ones, which proves you are all bullshit.
Do you think I am new to the Ng

<No. I already stated what I thought you were.>

only since doug or the anti keyclown shit started I have been out here long before you got your web tv starter kit.

<Uh, is that supposed to impress me, the group, or yourself? "Cause I am certain only the latter would care?>

"You really need a life. Glad I can bring a smile to your mundane world."

You need to get the life, I am laughing at you,

<Again, I am glad I can bring joy to your otherwise pious existence.>

not with you, you are like a punching bag that gets abused daily but keeps coming back for more.
"Who said anything about you going anywhere? I want you here where I can continue to make a fool out of you and your "cough cough" RF theory. Now if you are so cool, why are you afraid to let me know your regular name? Yes, junior, you are afraid."

You did I will qoute it for you,"It has always been you c'hawks talking about what is best for the group, an alleged concern for everyone, attempting to make your own group, even pleading for members." Well I have yet to see you ever post anythoing of techical nature when will you start?

<Well, let's see. I have answered many questions on this ng concerning various items. If you were here that long, you would realize that. Technical nature? Depends what you define it as. On the same note, I have never seen you add anything to anyone here. Looks like you slipped again.>

I am waiting.

<Of course you are. I validate you.>

I also told my boss about you

<Ah, yes, but of course you did. It is how you fool yourself into thinking you have credibility, validity, merit. As previously and correctly noted, you need others to validate you, you are insecure and lack confidence, so you seek approval from others. Your try to claim otherwise, but just aren't that smart to pull it off.>

and your rf prowess, I said there is a guy who lives in a trailer trash park in Florida, who is a guru of webtv, doesnt know how to turn on a computer, but he likes beating dogs, his meat and maybe children, he is an avid freebander who says he runs no power but acts like he is a Super Bowl 6 Hero, he said come on up he will start you tommorow. You can start mopping the floors cleaning the bathrooms and emptying the trash buckets around the shop. And the best part is you get a rasie from you present salary. Now I know $5.75 an hour seems like a lot but with your skills .

2948. Re: TOP TEN EXCUSES WHY LANDSHARK POSTING IN

Newsgroup: rec.radio.cb
Date: 2001-05-25 14:30:04 UTC
From: The Landshark <Landshark@TheLandshark.Com>
Message-ID: <m0uP6.2595$jC2.412343@news.pacbell.net>
Source record: 83248

Response below:

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the sliced onion on the roast. Place the roast on a rack in a roasting pan. Roast in a preheated 450F oven for 20 minutes. Reduce the oven temperature to 325F and roast 1 hour more. Reduce the oven again to 300F and roast about one hour more or until the beef registers 115F for rare in the center when tested with a meat thermometer. Remove from the oven and allow to stand 15 minutes in a warm place. Slice and serve immediately with Wine Sauce for Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan. Simmer, uncovered, until reduced to 2 cups. Add any pan drippings from the rib roast to the sauce. Strain the sauce and skim off as much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a salad and rolls.

Explained on previous accusation.

> 8. Sparky, Dougie altered UseNet records.

No, I never said that.

> 7. Mother In Law did it!

Maybe yours, not mine.

> 6. Wife was "bi-curious" during pregnancy.

Interesting, but again a fantasy of yours. She really
is quite amused by all this, she say's you guy are acting
just like the people on the cb.

> 5. Got confused, thought it was rec.radio.cb

Nope, I didn't do those posts.

> 4. Damn cat got on keyboard again!

Don't have a cat.

> 3. International Conspiracy.

Maybe in your eye's.

> 2. Buggy software.

Possibility, but I doubt it.

> 1. System Error!

Another possibility, but again doubt it.

>

You see Doug, when you and your friends feel cornered,
all you can do is throw this type of crap. You did it to
twistedhed, you made allegations against Sean, Dennis, Eitner and so on. I
have explained to you that I didn't make
those post, shown with prorper reasoning why. I have
asked for the headers, have you posted them? I want to
know the dates and times of those posts, then maybe you
can explain to me why I want those dates & times.

>Don't use a TV antenna or an AM/FM antenna for your CB.

You can use a TV antenna if you use a tuner. For best results use a 300 ohm wire feed it to a antenna tuner and hook it up to the radio. You can then match it to 1.1 SWR. Make sure you don't have a TV hooked up to the TV antenna or you will destroy your TV!

If you say the posts are forged then of course you will say the headers are
forged, too.

Best thing is for YOU to go retrieve the posts in question and do a header
search. You will see the headers of the person posting in the homo groups
MATCHES with that of your postings to rec.radio.cb at the time.

As far as I know there is no 14th street either. But Mo'Town is also known as Detroit, and Southfield is a suburb on the north west side. Given the nature of the event I doubt the poster would be dumb enough to give his real location. So he is either jerking peoples chain, or it could be a code of some kind that people in the group would recognize.

My guess is that it doesn't. B3s aren't bad thataway - now a Hammond X-66 - THOSE were VERY prone to even legal 5 watt signals within 200 yards. I know, I've owned 4 of em and still have 2. (also owned A100s, M3s, B3000, heck - it take me several minutes just to remember all the models!)

73 from Rochester, NY
Jim

<It wasn't a repy. It was a predicted quote I elicit from you.>

--
Ok I guess were waiting for me to say what you predicted? Let me know when
you elicit this quote from me.

<Only because you addressed me in some unknown alias and started making
outrageous radio claims which you can not back up.>

Ill put it this way you prove that I did that, post where I did make some
claims about a radio and I will back it up, You have a chance to "get one on
me" all you need to do Is prove it was something I personally said. Ill be
waiting. prove one for you.

<Worked up? Ok, if you say so.>

I don't have to say anything your action speak volumes.

<Now I have reduced you to threats? And you still think I am not in
control?>

Twitsie Do you think that was a threat? You are in control of nothing I am
in control of you Yes I say Jump and the next day guess what you say How
High!
You are a puppet that we all play with.

<Every post you guys make is queer related. >

I told you I am not "you guys". Perhaps you have me mixed up with some other
asshole, your posts are laden with fag this homo that, leave me out of that
part of your life. .

<Uh, better look again whose mind that stuff is coming from.>

I'll give you a hint go look in the mirror .

<No, you mentioned a PRIVATE whatever that took place with Adair. What
did that have to do with the topic of the ten meter amplifier that
allegedly does 110 watts and doesn't modulate?>

I said I may have or may not have had a private "conversation" now how do you get a liason, secret meeting, or any other gay innuendo out of that unless you have that shit on your mind. As far as this amplifier why are you asking me about it? Why would I have any information on this.

>Then you appear out of nowhere and attacked me for slamming Adair for his rants and attacks and not staying related to topic? And we are not supposed to
think you are the same as he? LMAO!>

Yes I am vapor man I appear out of thin air !I don't know what your pea brain thinks twisite, personally I don;t carew but I am not the same as anyone I don't follow anyone. Truth be told, I just don't plain like you at all. regardless if Doug or whoever posts about you. You make many assumptions and prove none of them. LMAO too

<Uh, only you two consistently bring up queer acts on the radio ng and accuse whoever disagrees with you as being faggots. You alos ran to his defense when he was getting slammed for acting that way, and then you joined him in the exact manner. Hell, even the diehard legal cbers that disagree with freebanding and running power don't stoop to your level when arguing their case.>

<Again, I am glad I can bring joy to your otherwise pious existence.>

Oh it does me good to see you getting spanked daily on here.

<Well, let's see. I have answered many questions on this ng concerning various items.

Answering a question, wow you have answered many questions providing Technical expertise and answering questions are not even close.

<Of course you are. I validate you.>

Oh yeah that's right you are the parking lot attendent you validate my ticket, then i throw you some loose change for a tip.

You are right, ground-wave propogation has nothing to do with the
physical length of the antenna. But radiation efficiency is much
better for a full-length whip than for a loaded antenna.

>Never key up or attempt to operate your CB without a working antenna or
>"dummy load" (non-radiating antenna simulating device) connected to the
>radios antenna jack, unless you have extra money to buy another radio.

The near field extends for about one wavelength, but it is impractical
to mount another antenna 11 meters away on a vehicle. I have never
seen any problems with antennas mounted close to each other except
when they bang into each other.

>Your radio cannot tell one component from another. As far as the radio is

The preferred method is to correct the mismatch by properly tuning the
system.

>Excess coax between your radio and antenna mount should never be wound into

I have done a couple repairs when this trick was used. If you do it,
watch your SWR very closely. Glycerin works ok, and can be added to
your windshield wiper fluid as an antifreeze (not to mention other
uses...)

>When tuning your antenna(s), make sure that you do so with the vehicle
>doors, hood and trunk closed. If left open, they can cause inaccurate SWR

The higher the better. Avoid mounting the antenna adjacent to vehicle
surfaces, like mounting the whip on the truck bed right behind the
cab.

>Remember, all transmitting antennas need ground plane (counterpoise). Base

>length), vinyl cap, tuning screw complete.

I have installed antennas on cars, trucks, campers, vans, motorhomes,
dump trucks, cement mixers, combines, etc. and I have never had the
problem of 'excessive' ground plane.

>The vinyl cap on any "tunable tip" Firestik antennas is optional. However,
>your antenna needs to be tuned as it will be used . . . with or without the
>tip.

But it does tend to keep out the elements (pun intended).

>Magnetic mounts should be used in temporary situations only. If you leave

There's an easy and obvious solution to that problem...

>Generally speaking, center loaded antennas perform better than base loaded
>antennas, and top loaded antennas perform better than all. For any given
>antenna design (base, center or top loaded), the taller the antenna the
>better.

True story, but it kind of contradicts what you say near the beginning
of the post.

> With length comes a wider bandwidth (lower SWR over more channels),

What?

>more power handling capability

I don't think so ...

> and overall performance increases.
>When ultimate mobile performance is desired, function should be given
>precedence over mounting location convenience and appearance.

>Don't confuse SWR with overall performance. You should seek SWR of 2:1 or
>lower on channel 1 and 40, but keep in mind that best performance may not be
>found at the lowest SWR readings. For the most part, if you get your SWR
>below 2:1, on both ends of the band, don't be overly concerned about using
>meter tricking procedures that bleed off energy.

If you trick your SWR meter by using a certian length of coax (for
example), your SWR meter may not be able to detect a fault that may
occur in your system in the future. Find an acceptable SWR and don't
trick your meter.

>The SWR meters built into CB radios are okay for general readings, but are
>rarely sensitive and/or accurate enough for fine tuning of antennas. Use
>them mostly to indicate serious high SWR problems only.

That's because the SWR meter was never intended to be used as a method
of tuning anything, only to indicate the presence of faults and
measure their severity.

>Firestik has tested literally hundreds of SWR meters. A large percentage of
>these have shown to be off by 0.3 to 0.7 when compared to a piece of
>certified equipment. There is no standard among production meters. However,

>Aside from cost, the type of wire used in or on antennas (copper, silver,
>aluminum, gold, tinned, etc.) has negligible effect on antenna performance.
>The antenna must be designed to resonate with the wire type and gauge chosen
>by the designer. However, larger wire gauges will normally increase the
>bandwidth and heat dissipation abilities of the antenna.

The bandwidth gain with larger wire guages is also negligible. If you
have a problem with heat dissipation on a mobile antenna, you have
bigger concerns. And not just from the FCC. The retina of the eye is
very suseptible to heating from RF radiation. It only needs to warm up
a little in order to begin the formation of cataracts, and that
warming is not felt by the person at all.

>Copper is 55% better than aluminum, 27% better than gold and 578% better
>than tin insofar as conductivity is concerned. Silver will conduct AC/DC
>current less than 2.5% more efficiently than copper, but the cost to
>performance is generally unjustified and any gain, insofar as RF
>transmission is concerned, is negligible.

RF is propogated on the surface of the conductor. Silver-plated copper
is the best, but yes, it is only a marginal gain. Most antennas are
stainless steel or aluminum, and the difference in performance is
again negligible. The important factor is corrosion. Bare copper
corrodes easily, and silver oxidizes over time. Gold, aluminum, and
stainless steel don't corrode easily, if at all.

>If devices other than an SWR meter are going to be used between the CB radio

>reactive to cable routing errors and will almost always outperform systems
>that are terminated at the antenna base or antenna end of the coax.
>Cables and antennas from standard & no-ground plane kits are not
>interchangeable. The "No Ground Plane" antennas from Firestik have a yellow
>band near the base.

Except for no-ground-plane antennas, coax should be terminated to
ground at both ends.

>Wire wound antennas with a plastic outer coating will greatly reduce audible
>RF static when compared to metal whip antennas.

... uh .... what?

>If you leave your antenna on your vehicle permanently, remove the rubber
>o-ring that is found on the threaded base of some antennas. Tighten
>permanent antennas with a wrench. Add a lock washer if you want.

That rubber o-ring is to keep water away from the threads. Remove it
and sometime down the road you are going to have major problems.

>If you use mirror mounts and often find yourself in areas with overhead

The box is not smokin, and its not pulling massive amps. The box is working. Again, why are the relay contacts burning up?

>

> nearly a dead short.
>

Pills AKA transistors are just a couple of ohm device, therefore the 25 to 1 xformer ratio inorder to drop the 50 ohm input impeadence thru the ferrite core xformer down to a working impedence for the pills and then stepped back up and out to the antenna. Again the box is working, the relay is burning up.

> One of the most common methods to get around this problem is the use

> more cooling than necessary, i.e, more power, i.e, poor efficiency.
>

These RF power splitters and combiners are intended for combining the powers of multiple amplifiers having 50 ohm inputs and outputs Indeed. Power balancing resistors, which are necessary to maintain operation at reduced power if one or more amplifiers fail. Without these resistors, the power output will be zero in the event of a failure.

> There is another problem with the splitter/combiner method, and that

They are in phase and have been tested in invidual sections of 8 pills for effeciency. When testing is complete they are all tied together.

All your mumbo jumbo sounds great but you still haven't answered my question. Big amps are built all the time is parallel and dont have this problem, again how are they bringing the input impedance up? I dont want to hear all this, "well how about trying them in series" stuff. Have YOU build a big box before? Quit insulting people and then try to impress people thinking you can intimidate them at the same time with technical jargon. Your what we call a "jive pertender" If you dont agree with other peoples

practices go get a job for the FCC and get paid for it. Even though you assume we dont know much by attempting what we do, at least we are pioneering for the futer and not following suit like a bunch of lap dogs. I gotta run and head out to catch my flite.

> the input impedance to 50 ohms?

Hook a "line section" up on the input of the big box, turn the slug towards the "source" of power "driver" Now tune the input circuit "variable capacitor" for lowest swr.

How are you combining the different stages? You could also use a LC Network to tune the input/output. But ask Twitsie he should be able to help you he said he was very rf savy.

What you want to hear is a quick fix. You don't want to hear any of
the reasons behind it, and you don't want to learn anything you don't
think you need to know. You want it, you want it now, and you don't
want to pay for it. Do you think people like me spend years in college
just to do your thinking for you? Wrong.

> Have YOU build
>a big box before?

I have designed, built, operated, blown up, and repaired more stuff
than you can imagine.

Well then, Mr. Pioneer, blazing a trail that was cut long before any
of us were born, did you ever think that maybe you have DC going
through your relay? It could be caused by a shorted transistor,
transformer or cap. My guess is the combiner got too hot and shorted
the windings. That may have been caused by a shorted transistor (yes,
they do short, and they can conduct huge currents before blowing up).
This is just one possibility. I guess you will have to pioneer an
education-free method of troubleshooting, too.

G, I have read this before and disagree with alot of the info, Sparky was asking questions about some of the info like you wrote it and you would have an answer for what was said, plus I didnt really think you would sit there and write a book that long for the CB NG,

Hi Jack,
I won't remember, but I do have the harddrive
from that machine and since I had it set up then
to make a log, I can find out if it was when it was
in for repair, or from a co-worker that I was feuding
with at the time. Thanks for the concern though.

The Landshark
--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Hi jack,
Cool, I'm glad you and Doug, Leland, Sparky
agree, I for one don't have to prove a thing.
I have explained, and if you four don't like it,
sorry, I don't care.

The post has a lot of good information, but some of it is bunk,
regardless of whether he wrote it or not. But like I said, if he put
his name on it, let him defend it.

BTW, it's not necessary to quote the whole post just to add a couple
lines.

Yeah...but you could use a rusty bedspring if you use a tuner. Why not just cut a resonant piece of wire instead of trying to load TV antennas, bedsprings, and other odd pieces of metal?

Message-ID: <DiBP6.98$df1.97496@news.pacbell.net>
Source record: 83349

Response Below:

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the sliced onion on the roast. Place the roast on a rack in a roasting pan. Roast in a preheated 450F oven for 20 minutes. Reduce the oven temperature to 325F and roast 1 hour more. Reduce the oven again to 300F and roast about one hour more or until the beef registers 115F for rare in the center when tested with a meat thermometer. Remove from the oven and allow to stand 15 minutes in a warm place. Slice and serve immediately with Wine Sauce for Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan. Simmer, uncovered, until reduced to 2 cups. Add any pan drippings from the rib roast to the sauce. Strain the sauce and skim off as much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a salad and rolls.

On the contrary, I didn't say that, I asked for headers
to prove that it did come from my machine. If it did, there is
a logical excuse, but of course Doug, nothing is logical to you.
> Caught trolling tranny homo news groups looking for dates? Do like
Landshark

Check the archives. You would think in a CB group there would have been a
lot of discussion of mobile and base antennas, DSP and receiving filters
for sideband, improving quality of AM modulation w/o distortion and splatter,
etc. Instead it was all about AMPS - who's was the "biggest" and "baddest"
and how to "do" illegal power and channel mods.

Boo hoo! You hardcore keyclowns CRY cuz ya miss all that!

Sorry Sparky, I usually do but its friday well you understand. He did say it was written by firestick, as I said I have seen it before Alot of it is for the beginner cber, most of whom wouldn't know any better about some of the claims made. It is written to sell antennas.

>Beware of information from "experts" (real or self-proclaimed).

Does this mean disregard what they are saying as well? Why beware of info from a real expert, since after all aren't they "real experts"

>The best book on theory will produce the >worst antenna you could own.
--- Yeah ok whatever you say.

>Some "experts" may "claim" 5/8 wave mobile antennas are not possible because they would need to be 23 feet high.

If they were 23' tall they would work a helluva allot better than a loaded shorter version.

>ask them how a handheld CB can have a 1/4 wave antenna 8 inches long
>and 1/4 wave mobile antennas from 12-60 inches long in spite of the fact
>that a physical 1/4 wave is 108 inches.

Ask them how efficient they are while your at it. Also ask them how an am broadcast band antenna fits inside your portable am radio, when it should be close to 100' long.

>All mobile and base transmitting antennas need counter-poise, more commonly
>called ground plane. The antenna is the reactive unit, the ground plane is
>the reflective unit. Neither is more important than the other.

After about 1 wavelength or more above earth the ground radials have minimal effect on ground losses.

It depends on the person's vision of the future. Perhaps he thinks
that the future of the EM spectrum is going to be a free-for-all, and
he is preparing for radio-geddon.

My best antenna ever was a non-resonant piece of wire. It really worked well and I'd have another one up like it if I had the space. Non-resonant piece of wire. 8 ga wire. Only up 30 to 40 feet .. several hundred feet in length and terminated to a chain link fence at the far end. It cranked. 65 watts was fine for hundreds of miles during the day on 1.8 MHz and 25 at night (the legal limit here back then) was good across the country. Performance increased at higher frequencies ... (although why anyone would try loading a tv antenna beats the bejingles out of me. You'd get better SWR and about equivalent performance from an old Heathkit Cantenna.)

73 from Rochester, NY

You can quit pretending that I'm in your killfile. You can also quit pretending that you don't know where those posts came from. If you want the headers, go get them yourself. Since you are a system administrator it shouldn't be that difficult. And if, as you say, some mysterious hacker hopped on your keyboard and posted those messages, then the headers aren't going to do you any good anyway. So quit wasting your time and our's by doing nothing but whining over and over again about how "it's not my fault"!!!

not blaming you Jack, I had no idea those post's
are out there until some one found them, plain &
simple. So you all can think what you want, but if
you work in any sort office complex, or have ever
taken a machine in for repair, well, you can figure
it all out, sorry to burst all the bubbles.

TTFN,
Going away for the weekend, so please save all
the response's till Tuesday, I'll back to work then.

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Why dont you run a plate modulated dildo in grounded grid directly up your
fat ass. IM quite sure it will fit james and if it will not I know a couple
of cute Truck drivers That can help you get it in, you think your sooooo
smart, Well you aren't shit to me just another one of the bad amateurs. IM
glad the extra class guys I know dont act like you, You probably pull this
shit on your "legal" CB in your home town. I bet you even deadkey to plug
peoples ears now thats not legal!!!!!!!!!! PS. You can run
whatever bias configuration on that you want to!! Good day.

From: K2Henry (adkline@aol.com)
Subject: Where's Dennis #12 - READ!
Newsgroups: rec.radio.cb
Date: 1999/05/21

OK

Dennis #12 will no longer be on the newsgroup or answer email.

After the exchange with Mark Fuller on this newsgroup, Lucent Security received
a complaint from someone (on legal letterhead) stating Dennis (design engineer at Lucent)
was engaged in and promoting illegal activity as viewed by the FCC. (Lucent, of course, owes it's
livelihood to past and recent FCC rulings.) Various email statements, taken out of their original context,
were offered up as proof.
Draw your own conclusions.

Comments?

Henry

Charles,

I have been at this quite a while... My statements above where there to show the Mark Fuller #2 what my true feelings where....

I also ran into a crowd of advanced and above hams at the end of the ride...

They all wanted to know about my double coil Dr. Crow, three alternator system and 16 device class AB box.... They where thrilled when I showed them 2.5 Kw mobile!

Especially when I let them loose on 10 meters with it! hehe

The comment that a couple made that really surprised me was that they acknowledged there was more expirementation on 11 meters than there was on the ham bands! Unbelievable, but true!

"Bigger"
> pills won't have any more output without component/design changes.

I agree. Newer M250s use SD1446s. Those are the highest power
3/8" flange transistors. The higher output ones have 1/2" flanges.
The transistors with the smaller flanges are more efficient. That
means the amps that are built around them are usually built using
thinner circuit board foil, thinner wire, and smaller transformers.
That means that even if you were to retune it, you'd end up with
lower than expected output. Along with that would come decreased
efficiency, an increased heat load, and a possible decrease in
reliability.

If the amp is an older one that uses 1/2" flange transistors, you can
use higher power 1/2" flange transistors, but there are no "drop-in"
replacements that will increase the output. In other words, retuning
will be necessary.

The rule of thumb is to stay with the same flange size. And the only
drop-in replacement that will result in increased output without
retuning
is to replace MRF455s with SD1446s.

> You should be better than that, but obviously you are not!

Everything is a "putdown" with you Dennis, and all you're arguments
are phrased as "you this" and "your that".

If you look at what I responded to, someone told a story of a CB
operator in Mass.(?) who boasts about being on welfare and ridicules
those who work for a living. The observation was made, in an ironic
sort of way, "[w]hat a wonderful world."

That caught my eye and made me wonder how it's in any way dissimilar
to the large number of CB operators who operate illegally and ridicule
those who complain about it. The same irony seems to exist.

It might be held that IBers (Illegal CBers) are a product of society
and not entirely responsible for their actions. I'd even support that
if there were a more concerted effort to document this breakdown in
the system. But, the same rationalization could be extended to the
welfare recipient. Like the IBer who can't distinguish between legal
and illegal, the welfare recipient can't distinguish between gift and
entitlement. Both of these moral degenerates may not be responsible
for their degeneracy -- but degenerates they are. Let there be no
confusion on that point.

If you had something of substance to add, please do. If you're simply
going to complain about me don't expect me to respond very much.

Mark

No I'm sorry thats Bullshit.... If you broadcast on a loudspeaker
on your roof that disturbing the peace , because you can't limit the
volume to your neighbors. But on the airwaves you have the option
to turn it off if it bothers you, not like it being over open
air.

>air.

Just as we have a right to share a public resource, I have a right to share the airwaves. Turning off my radio due to your _illegal_ behavior couched as "freedom of speech and religion" is not an option -- just as putting earplugs in my ears when you broadcast from a loudspeaker from your roof is not an option.

There's really no excuse for rampant illegal CB practices. The only possible excuse I could begin to entertain is if the government defaulted on the rules, thereby effectively proving there are no rules. I have a difficult time believing this is the case because, 1) we've just seen an IBer (Illegal CBer) get busted in Texas. 2) The primary champions of the "FCC capitulation theory" seem stunningly absent of any referential evidence which could be used to defend illegal practices. These champions likely point to the rampant proliferation of IBers and illegal practices -- but the fact that CB is dominated by illegal practices and the crooks don't turn themselves in is hardly proof that FCC has actively capitulated.

The best way to justify the rampant illegal CB practices would be to work a real complaint. Unfortunately I don't think many illegal CB operators are anxious to do this because they don't want to *really* find out. It's easier to wave around a story about something that once happened, which doesn't appear to have been pursued, and can't be pursued today except in terms of "so-and-so on the Internet said...".

Using the computer at work for posting to a newsgroup? Does your boss
know about this? Does your boss know about your secret identity?

> The Landshark

So let's see .... you are saying that you didn't write the following
in rec.radio.cb?

==========

From: s3sharkman@hotmail.com (s3sharkman@hotmail.com)
Subject: Re: difference in amplifier class
Newsgroups: rec.radio.cb
Date: 1998/09/27

Yeah, but unfortunately, the cost of living
has increased 4 fold in the past 15 years.
Yes that doesn't warrant that much of
an increase, but it does warrant an increase.
Now for Harley's, you pay for the name,
plain and simple.............

The Landshark
"The Mets are not having a Buell-tiful day"
"But the Niners are having a Buell-tiful day"
98 S3 Thunderbolt powered

==========

98 S3 Thunderbolt powered? s3sharkman@hotmail.com? And that Jason Halverson -just happened- to be using the same email address? Both of them?

Subject: Swap File and MaxPhysPage(in system.ini) settings
Newsgroups: comp.os.ms-windows.setup
Date: 1995/05/28

I need to know the proper MaxPhysPage setting for the system.ini for WFWG 3.11. I have 20Mb of physical RAM (20352Kb). The format is: MaxPhysPage=<hex page number>, where <hex page number> is the maximum physical page of RAM. I read that windows only recognizes the first 16Mb of RAM. I have an 11Mb Perm Swap file, but when I start windows, I have only 23Mb free. Any help is greatly appreciated.

==========

Isn't that the same email address you used to post many messages in rec.radio.cb?

I'm sorry to say John your wrong. With recent changes in the law, I've
seen a lot more radar enforcement in place's normally you wouldn't.
All up and down highway 5, 505, some parts of 4 and other outlying
rural roads. Also I was going up to the Northern Sierra, can't remember the
number of the rural highway, but it's the one that goes from Red Bluff to
Mt lassen and Susanville and beyond. Any ways they were using Radar
all the way From the town of Chester (which is where I was at) all the
way into downtown Red Bluff.
Now these weren't local Law, these were CHP, and they also were
using radar on highway 89 as far as Quincy while I was up there.
So I think the CHP has far more options to use radar now in rural
situations.

Hi Doug,
Oh, darn, I feel so embarrassed, boy,
you all caught me, gosh, ghee, oh golly.
Again, I don't know anything about those
post to those alt. groups. So go ahead
post away, because I don't care. First my
name is Jason, now Mark, whatever you
three want to post. So I guess, this is it,
I must go away in shame..... :^)

The Landshark.

P.s. If I come back and check on the group,
I'll bet you will still be thinking about me, posting
to me, even though I'm not on here anymore.

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Here's a post to rec.radio.cb in July of 1999. Some of you may remember it. Landshark posted quite regularly to the group. Just do a search at Google and you will find lots. There's no doubt it is the same "Landshark" we all know and love. Here's just one example:

==========

From: s3sharkman (s3sharkman@HOTMAIL.COM)
Re: Where are all the big boxes?
Newsgroups: rec.radio.cb
Date: 1999/07/16

Well dana my man (or woman) I know the every mighty
F.C.C. won't mess with me. I've been running power
since the early 70's, and never had any problem.
Plus it's gonna be kinda hard to figure which house
it is, considering that my 3 immediate neighbors all
have antennas.
My original post really had nothing to do with
the general population, it was about guys like
Dennis, Sean, Toll-free, Painkiller, etc., etc.,
Hell even the Professor doesn't come out
anymore to throw in his one liners.
I just hope that all the wanna-be lawyers die
the death of brain cancer or some slow debilitating
disease.

Nice try, shark. It won't work. It doesn't really matter, since you are a liar and a hypocrite, which your own words in all the other posts clearly show. And boy, there are a lot of them, not just "two or three" as you tried to make us believe.

Actually, I don't believe your name really is Jason, as the post would seem to indicate. But I don't think it's Mark, either. I think it is possible that the name on your driver's license is false as well. You are just the kind of person that you accuse others of being -- a person that hides behind a keyboard. You don't have a name that's worth any recognition, so you don't bother to tell anyone. That's ok because I agree -- if I was your father, I wouldn't want you to ruin my integrity by using my name, sexual deviant or not.

But you won't go away, and this we all know. You will continue to log on and spew your BS wherever and whenever you want, just as long as you feel you can avoid personal responsibility for your lies by using an alias. That's to be expected from a hypocrite. Twistie's a different story: He's so paranoid it's entertaining. But you are just a yellow-dog, and your stench will be recognized regardless of what name you use.

So post away. When you post, please be on-topic. Leave the trolls alone. And please don't promote pirate radio or other illegal behavior, or we may have to go through this all over again.

Isn't it cute.. It can spell better than the rest it didn't misspell FCC.
Oh I bet your mommy is so proud of you... What the fuck!
Are these things all born this stupid or what?

Oh just because you are a cb'er you must run a illegal radio...
Thanks inforcer for the idea Im going to have to go to the local cb guy and
get a new radio
so I can break a few rules wow this is going to be such a rush. I can't wait
for another storm so I can fuck up the local hams
running around trying to see the weather.
The babies can starve I'm spending my welfare check on new radio equipment..

Hey butt twinkie Go back to your pedophile newsgroup and get a life.

Quack! Quack! Quack!

MUDDUCKS RULE!!!!!

From: "CB RULE ENFORCER" <ENFORCER@FCC.COM>
Subject: ILLEGAL CBERS ARE ALL OF THE FOLLOWING THINGS
Date: Sunday, May 20, 2001 12:54 PM

1. Criminals. They are in violation of regulations that could land them in
jail or get them big fines.

2. Uncaring about lives and safety. International search and rescue
operations
are only one of the services allocated the "freeband". There are others as
important. The illegals have no concern for the disruption caused to these
services.

3. Uncaring about neighbors and their own towns in general. RFI to consumer
electronics, interference to hospitals, airports, public safety services,
etc. Is almost solely a result of illegal CB equipment. The statistics do
not lie. There are millions of CB'ers, only a few hundred thousand hams.
Amateur equipment is meant to be operated, generally, at a higher power
level
than CB radios. It is therefore subject to tighter spectral purity
requirements
than CB radios. CB radios are meant to be operated at low power levels,
which
means that these "dirtier" rigs, will not pollute enough to be worried about
IF THEY ARE OPERATED LEGALLY. As if that will happen, given the socially
mutant attidudes expressed in this NG.

Be PROUD, ILLEGAL CB'ers. You are a sociopathic group of lawbreakers vainly
attempting to justify your actions. No wonder you are slammed with gay

stuff...You
act like gays trying to promote their agenda, even though the world knows
they are an aberration. So are you.

It's quite simple folks... Happened in the UK just this past December 2000 while I was there.

The truckers simply stopped delivering the fuel and went on what was effectively a strike. HOWEVER! They still supplied police, ambulance, hospitals, etc... But there was hardly a car in the road in London for that week. Subways were VERY crowded.

Tony Blair was shitting his pants, but somehow his Jaguar still had fuel.. Go figure...
(He's the Prime Minister of the UK Sparky...)

You can read more about that here
http://www.cnn.com/2000/WORLD/europe/09/13/britain.panic/

Panic buying because trucks had no fuel to deliver the produce... Oh, it was a show... Restaurant prices went up, oh yeah... But the air was really clean that week.

The week before all of the above I was here http://www.lgm.guernsey.net/ watching the whole thing develop. Planes being fully fueled in Paris so that they could make it back without refueling...

That's how you get the oil suppliers attention. You're never going to get Joe Schmoe average citizen to stop buying it.

A Union... Now you've got the oil companies by the balls because you've taken out their supply chain, and hence Joe Schmoe average citizen doesn't have a word to say about the matter accept, "Need"

Strike not for a wage increase, strike because of the operating costs for the trucks themselves... THE FUEL prices.

YEP!! That's exactly what happened in the UK, but there it's not called the
National Guard. Some kind of Brigade I think. They were armed and rode
with the drivers that delivered fuel to emergency services, etc...

>
> This is only a prediction, but it is not an exageration. It is the
> result of a long study into the causes of modern civil conflicts, and
> from first-hand observation of the civil war in Lebanon. Of course,
> all this may be averted if GW ever pulls his head out of his ass.

Started out good, but the last sentence threw me... Can't picture G Dubya
in that position. If you're suggesting that there would be a revolution
over gas prices I don't think that would happen. Congress would sign any
bill that approved drilling for oil LONG before that ever happened.

Telling the oil companies, "Hey, until you beef up supply, we're not going
to deliver this anymore because it costs too much to deliver it!"

Now you have their full attention. Why? Because their supply of income has
been restricted to a VERY small percentage of what it was last week or the
10 years prior to that! Uh oh, better do something, quick. And who do they
call? Probably a lobbyist. Go figure.

Who does Joe Schmoe the average citizen call/write/e-mail/fax?
The congressman, and their representatives..

Who's got the hot "potatoe" now? It's certainly not Dan Quail!

What's wrong?
Can't handle the fact that hams do little to further their form of radio and CB'rs are still out here having a good time at it?
Even I can remember a time in radio when there was still much to be learned from playing around with the radios and today 99% of the people buying ham equipment could not possibly understand the insides of their own radio much less build one or repair one on their own. CB radio has fast become the place for those who like to tinker with radio to be able to do it and not screw up a $4000 rig in doing it. With Heathkit being out of the game for close to 2 decades now, very few kits and experiment packages are even available to the public. Could this be one or more of the reasons CB has become the wonderful radio playground we have today?

Karl,
Imagine the shit storm that would come down if they were to take place here. I don't think it would for some time to come because truckers in this country can never get together on getting a strike going. In the UK they were able to actually get one organized and it was effective to say the very least. While I sit here on the east coast with Benz and an Explorer in the driveway waiting for fuel prices to ease on up to about $2.50 a gallon, I'm NOT going to be one of the crybabies bitching about the price of fuel. Sure, Your going to see plenty of SUV owners who went and shelled out BIG BUCKS for the ride whining about now having a truck that gets 9 miles per gallon. Most of us will just tell them to suck it up and pay just like they did when they went and spent 50k plus on the truck to start with. In my business I see plenty of HI END car owners (Bentley, Rolls, Ferrari, Aston,Lambo) who won't even think about the cost of fuel for their toys. I'm not even going to go into the fuel consumption rate of a small 70 foot Hatteras (SP?).

It's suprising a local newspaper had an article about the Shootout in Augusta, Ga
Good to know we are considered "acceptable to society" in someone's eyes....

CB club hold annual radio convention

Web posted Mar. 30 at 02:18 AM

By Brad S.
Staff Writer

The antennas strapped to their trucks and vans look like they could send a signal to the moon.

These men and women have catchy names such as Smooth Operator, Cool Breeze and Lady Wildflower. They talk a lot, on the citizens band, that is.

The Garden City Channel Masters CB Club held its annual radio competition, called a break, Saturday in a south Augusta cow pasture. About 600 radio enthusiasts came from as far away as New York and Texas to compete to see who had the smoothest voice and best radio rig.

``This thing is known worldwide,'' said Moses R., a local organizer. ``The guy who wins this is known as the reigning champion of the cow pasture.''

Saturday's competition, as one observer said, was a ``radio drag race.'' Radio operators with antennas poking off their trucks were paired off to send signals simultaneously over the same channel to an operator 37 miles away. The signal that gets there first and strongest wins. The other guy takes a seat.

CB users will hold these breaks all over the country during the coming months, but Augusta's competition is noted as one of the biggest, several participants said. The out-of-towners call the area the backwoods of Georgia.

There's a reason they meet out in a cow pasture. Some of these radios are so powerful they need open space or they might tear up the neighbor's television, several participants said.

The first thing one notices about this group of CB enthusiasts is everybody calls each other by their radio handles, the names they go by on the airwaves. Birth names don't work.

Smooth Operator from Memphis, Tenn., is Alonzo L., a machine operator with the post office who has penchant for smooth driving. He wasn't competing Saturday, just came to watch and see old friends.

As he spoke, two autos were lined up in a drag race formation. The green light said go. The engines revved, but the cars weren't going anywhere. Their radios

were. The standoff lasts 10 seconds.

``It's like the Indy 500,'' said Mr. L., surveying the cow pasture. ``They call this the killing grounds. This is where the shootout occurs.''

Lady Wildflower - Betty T. - made such a connection 17 years ago talking from Aiken to Augusta. Ms. T. met her husband Tom T., known as Mojo on the radio, over the crackle of the citizens band.

``We met in person a couple weeks later,'' said Ms. T.. She's the club secretary. He's the club president. ``We've been talking on the radio ever since.''

Do Right is Clayton S.'s radio name out of New York. He used to be Crazy Man, but someone else had the name. Mr. S wore a shirt Saturday with Do Right air brushed onto it.

Mr. S. said the real thrill of talking on a CB is making a connection with someone in another state, sometimes clear across a continent.

``You'll be talking to someone down in some other state and they'll tell you that you're coming in real good down here Do Right,'' said Mr. S., whose soothing high-pitched voice was made for the radio. ``That's a good feeling.''

Nice article, but the local newpaper made no mention of this during the past two years. Can you specify the name of the paper and publication date?

3065. 3.260 UPR Freq/Power update

Newsgroup: rec.radio.cb
Date: 2001-05-26 17:19:44 UTC
From: Golden Delicious <ryoupu8@yahoo.com>
Message-ID: <QARP6.23298$9D5.2054933@newsread2.prod.itd.earthlink.net>
Source record: 83417
Cross-posted to:
alt.radio.scanner.flame_fest,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Was monitoring Col. Steve on 3.260 United Patriot Radio last evening.
For those who don't know, United Patriot Radio is a self-declared "free"
radio station operating from Eastern Kentucky on the shortwave frequency
of 6.900 mHz (day) and 3.260 (night) mHz. Programming is "Patriot / Freeman /
Soveriegn Citizen" oriented. This station is also the new de-facto broadcast outlet
for the Miltia Movement in the United States. Some say it's a Clandestine. Other say
it's a Pirate. Whatever the flavor, the station is certanly the most curious transmitter
on the dial since the days when the legendary Wolfman Jack was broadcasting
into the USA from Mexico or the late Rev. Carl McIntire took his ship "Radio Liberty" off
of the New Jersey coastal limits to broadcast, sans-licence, in the 1960's.

Col. Steve said two pending changes with the station are in the works.
The first being operations on the freq of 3.260 USB will be terminated sometime around
the 1st weekend in June. Reason is the onset of Summer thunderstorm season
and the resultant high level of atmospheric (storm) QRN, all operations will
soon be on 6.900 USB only. Second, Steve reported that his "3 Kilowatt
Rock Crusher" amplifier should be up and running shortly, thus the
new transmitter power of 3000 Watts on 6.900 USB will allow for greater
coverage of UPR. Some of the station's "staff" apparently made the trip
to the 2001 Dayton Hamvention, and managed to obtain the balance of
components necessary to complete the proposed 3.0 KW power amplifier.
Hope that UPR has a small air conditioner and duct-work in place to cool that thing!

Finally, information on 6.900 UPR radio now appears to be being
hosted on the PBN web page which is at http://www.pbn.4mg.com
There is also an extensive write up on the station in the new
issue of Monitoring Times.

Not only are there no names mentioned in the story (initials only) but the writers name and the publication name is witheld, too. Legitimate? We think not. Sounds like a bunch of people who know what they're doing is illegal but are trying to gloss over that aspect of it.

RS doesn't have the right one in stock. It's special order. Just get a battery and a holder for the battery. Solder wires to connect the holder to the CPU board. Tape up the battery/holder combination and stuff it in the wire harness.

Replacement later on will be a lot easier.

One word: ARRL.

>and
>CB'rs are still out here having a good time at it?

Having an "illegal" time of it you mean.

>Even I can remember a time in radio when there was still much to be learned
>from playing around with the radios and today 99% of the people buying ham
>equipment could not possibly understand the insides of their own radio much
>less build one or repair one on their own.

Very true. But is that a good enough reason to go "illegal"? No. There's
QRP, Amateur TV, vintage AM, moonbounce, packet and digital modes, homebrewing,
antenna design, and a million other ways to explore and learn and experiment.

>CB radio has fast become the
>place for those who like to tinker with radio to be able to do it and not
>screw up a $4000 rig in doing it.

No. YOUR brand of "CB" has fast become the place for the lazy and criminal-minded.

>With Heathkit being out of the game for
>close to 2 decades now, very few kits and experiment packages are even
>available to the public.

Better not open a copy of CQ or QST, Train. Elecraft is flourishing. So is Ten-Tec. MFJ even has a line of kits. Stay away from the stereo magazines, too. Lots of kit-building going on in there.

What's interesting about you, Train is that you are SO bitter and full of anti-legal bullshit that it's EASY to shoot you down with a few facts.

>Could this be one or more of the reasons CB has
>become the wonderful radio playground we have today?
>Train

No. The reason is ignoramuses like you looking to get "something for nothing" with no responsibility or accountability attached.

3072. Tomorrow FCC gives ham bands to CB!

Source record: 83424

What are you hams goofy thinking that CB is ever going to die it is allready bigger than the both of you.
their are more illegal radios than you can shake your micro dick at.

Give up! it don't matter the splatter you are recieving is from california, NY,chi town and every other hick town in US as well as mexico go to CB band channel 6 and whine to them maybe they will listen HA!ha!.
if they can hear you with their alligator radio stations.

CB rules cannot be inforced nor can ham fcc just doesn't have the manpower.

If fcc fined and banned a indevidual for illegal usage that person would be back on air within 24 hours their are too many friends in cb and if they couldn't afford more radio equiptment their cb friends would give them all they needed I would give my existing station. As is complete.

I know the hams don't have that kind of friendship.

QUACK! QUACK!
MUDDUCK#1 SAID SO!!

>`The guy
>who wins this is known as the reigning champion of the cow pasture.''

Wow. What a distinction.

>Saturday's competition, as one observer said, was a ``radio drag race.''
Radio
>operators with antennas poking off their trucks were paired off to send
signals
>simultaneously over the same channel to an operator 37 miles away. The signal
>that gets there first

Radio waves travel at the speed of light. What's the competition for, "fastest
thumb on the mike button"?

>and strongest wins. The other guy takes a seat.

Strongest? No. More like "Better Jammer".

>CB users will hold these breaks all over the country during the coming months,
>but Augusta's competition is noted as one of the biggest, several participants
>said. The out-of-towners call the area the backwoods of Georgia.
>

Because it is?

>There's a reason they meet out in a cow pasture.

To hide from legitimate society, local cops, FCC?

>Some of these radios are so
>powerful they need open space or they might tear up the neighbor's television,
>several participants said.

Right. Those high-power transmissions don't ever get beyond that pasture
and tear up the CB band for miles, do they?

>The first thing one notices about this group of CB enthusiasts is everybody
>calls each other by their radio handles, the names they go by on the airwaves.
>Birth names don't work.

For obvious reasons.

>Smooth Operator from Memphis, Tenn., is Alonzo L., a machine operator with
the
>post office who has penchant for smooth driving. He wasn't competing Saturday,
>just came to watch and see old friends.
>
>As he spoke, two autos were lined up in a drag race formation. The green

light
>said go. The engines revved, but the cars weren't going anywhere. Their
radios
>were. The standoff lasts 10 seconds.
>
>``It's like the Indy 500,'' said Mr. L., surveying the cow pasture. ``They
call
>this the killing grounds. This is where the shootout occurs.''
>
>Lady Wildflower - Betty T. - made such a connection 17 years ago talking
from
>Aiken to Augusta. Ms. T. met her husband Tom T., known as Mojo on the radio,
>over the crackle of the citizens band.
>
>``We met in person a couple weeks later,'' said Ms. T.. She's the club
>secretary. He's the club president. ``We've been talking on the radio ever
>since.''

Betty T. ....Clayton L. ....Mrs. S. ....you'd think these people were porno
actors the way they hide their identities.

>
>Do Right is Clayton S.'s radio name out of New York. He used to be Crazy
Man,
>but someone else had the name. Mr. S wore a shirt Saturday with Do Right
air
>brushed onto it.

Real popular at truck stops I bet.

>Mr. S. said the real thrill of talking on a CB is making a connection with
>someone in another state, sometimes clear across a continent.
>
>``You'll be talking to someone down in some other state and they'll tell
you
>that you're coming in real good down here Do Right,'' said Mr. S., whose
>soothing high-pitched voice was made for the radio. ``That's a good feeling.''
>

It'd be a better feeling if they were doing it legally.

Hambabies are pissed because all their life they have conformed to the social standard and don't like to see a person get away with what they had to take a test for.

NG complaints and bandwith usage is not going to solve the problem. Niether maybe you should try your own back yard like your home town or are you too scared.

Quack!

Here's the FULL text:
==========
CB club hold annual radio convention

Web posted Mar. 30 at 02:18 AM

By Brad Schrade
Staff Writer

The antennas strapped to their trucks and vans look like they could
send a signal to the moon.

These men and women have catchy names such as Smooth Operator, Cool
Breeze and Lady Wildflower. They talk a lot, on the citizens band,
that is.

The Garden City Channel Masters CB Club held its annual radio
competition, called a break, Saturday in a south Augusta cow pasture.
About 400 radio enthusiasts came from as far away as New York and
Texas to compete to see who had the smoothest voice and best radio
rig.

``This thing is known worldwide,'' said Moses Robinson, a local
organizer. ``The guy who wins this is known as the reigning champion
of the cow pasture.''

Saturday's competition, as one observer said, was a ``radio drag
race.'' Radio operators with antennas poking off their trucks were
paired off to send signals simultaneously over the same channel to an
operator 32 miles away. The signal that gets there first and strongest
wins. The other guy takes a seat.

CB users will hold these breaks all over the country during the coming
months, but Augusta's competition is noted as one of the biggest,
several participants said. The out-of-towners call the area the
backwoods of Georgia.

There's a reason they meet out in a cow pasture. Some of these radios
are so powerful they need open space or they might tear up the
neighbor's television, several participants said.

The first thing one notices about this group of CB enthusiasts is everybody calls each other by their radio handles, the names they go by on the airwaves. Birth names don't work.

Smooth Operator from Memphis, Tenn., is Alonzo Lilton, a machine operator with the post office who has penchant for smooth driving. He wasn't competing Saturday, just came to watch and see old friends.

As he spoke, two autos were lined up in a drag race formation. The green light said go. The engines revved, but the cars weren't going anywhere. Their radios were. The standoff lasts 10 seconds.

``It's like the Indy 500,'' said Mr. Lilton, surveying the cow pasture. ``They call this the killing grounds. This is where the shootout occurs.''

Lady Wildflower - Betty Thomas - made such a connection 17 years ago talking from Aiken to Augusta. Ms. Thomas met her husband Tom Thomas, known as Mojo on the radio, over the crackle of the citizens band.

``We met in person a couple weeks later,'' said Ms. Thomas. She's the club secretary. He's the club president. ``We've been talking on the radio ever since.''

Do Right is Clayton Slocumb's radio name out of New York. He used to be Crazy Man, but someone else had the name. Mr. Slocumb wore a shirt Saturday with Do Right air brushed onto it.

Mr. Slocumb said the real thrill of talking on a CB is making a connection with someone in another state, sometimes clear across a continent.

``You'll be talking to someone down in some other state and they'll tell you that you're coming in real good down here Do Right,'' said Mr. Slocumb, whose soothing high-pitched voice was made for the radio. ``That's a good feeling.''

Damn right. I'm glad you've come around.

> He's setting a new standard in
> amp design in order to eliminate convection-cooled transistor amps.

That's not true. You need to review
our last conversation. I'm eliminating
the noise associated with forced air
cooling in legal-limit-and-then-some
base amps.

> Say, hows that revolutionary super-quiet liquid-cooled tube amp of
> your's coming along, Bill?

Wouldn't you like to know.

> Have you figured out where to put those
> fanless heat exchangers yet?

That was never a concern. They can
go literally anywhere. A heat exchanger
in the strickest sense isn't even necessary
if one chooses to use a large enough
coolant reservoir. Filtered tap water that
flows to the tube and out to a waste drain
is another option that eliminates heat
exchangers and the reservoir entirely.

The beauty of the design is in the flexibility.

The same amp could be used as a mobile
with an auxiliary transmission cooler as the
heat exchanger. In competition applications
the coolant reserve and flow rate are increased.

They're to ignorant to understand that they are just
perpetuating the thread. That amounts to free
publicity. No one pays attention to their temper
tantrums; they just go back to see what started it.
And there they will find the original message time
after time.

In a mobile you just use Freon instead. Got the pump sitting under the hood
on most cars as well as fans and heat exchangers.

Greetings!

That's what makes CB'ers dangerous...

We know too much...;-)

On Sat, 26 May 2001 12:16:25 GMT, while the modem was busy tying up
IRQ's with the Mouse, "Train" <cbmods@optonline.net> dissertated the
following:

:+> What's wrong?
:+> Can't handle the fact that hams do little to further their form of radio and
:+> CB'rs are still out here having a good time at it?
:+> Even I can remember a time in radio when there was still much to be learned
:+> from playing around with the radios and today 99% of the people buying ham
:+> equipment could not possibly understand the insides of their own radio much
:+> less build one or repair one on their own. CB radio has fast become the
:+> place for those who like to tinker with radio to be able to do it and not
:+> screw up a $4000 rig in doing it. With Heathkit being out of the game for
:+> close to 2 decades now, very few kits and experiment packages are even
:+> available to the public. Could this be one or more of the reasons CB has
:+> become the wonderful radio playground we have today?
:+> Train
:+>

Regards!
:+> Andy <+:

... You know your radio is really Modulating when...
... Elvis shows up at your doorstep and asks to use
... your Microphone!!!

Source record: 83530

>cb rules cant be enforced or ham

Sure, Mud Duck. All those news reports about busts are fantasy items. Odd how Pop'com, QST, RAIN, and the FCC enforcement pages all got together to continue the conspiracy.

>I would give my entire station.......

First, I doubt you HAVE a station.

Second, if you did, you'd be a "nobody" if you could not get on the air. So I doubt you'd give it away.

Third, talk is cheap. I have given away several nice, complete stations. Others in this NG have done likewise. Tell us what you've actually done--instead of bragging about what you WOULD do.

Finally, just so you know.......many of the FCC fines are mitigated by an agreement on the part of the offender that he/she will not use or possess any two-way radio equipment, except as reasonably required for employement. For example, a taxi driver may use a type-accepted radio on the proper channel, or a construction worker can use a walkie-talkie or Nextel as part of his job. So if you offer your equipment, be prepared if the individual politely refuses. Now you know the REST of the story.

In the next post, we'll discuss what happens to your gun collection if you are convicted of a felony. Hint: It follows the pattern above, except no exemption for job-related firearms. I've not heard of this alternative being tested, but perhaps you can go hunting with a bow and arrow--so long as nobody else in the hunting party has a firearm. If there's a gun in the group, you and the dogs must stay on the porch.

Reverse lookup hostname did not match.
Preforming whois on new hostname.
--- whois ---
[whois.networksolutions.com]
The Data in Network Solutions' WHOIS database is provided by Network
Solutions for information purposes, and to assist persons in obtaining

information about or related to a domain name registration record.
Network Solutions does not guarantee its accuracy. By submitting a
WHOIS query, you agree that you will use this Data only for lawful
purposes and that, under no circumstances will you use this Data to:

(1) allow, enable, or otherwise support the transmission of mass
unsolicited, commercial advertising or solicitations via e-mail
(spam); or (2) enable high volume, automated, electronic processes
that apply to Network Solutions (or its systems). Network Solutions
reserves the right to modify these terms at any time. By submitting
this query, you agree to abide by this policy.

Yes! I would prefer software though!

Quack!
M1

snip
While strictly speaking, they are in the eastern half of the state,
please call them southern and not eastern. Sumerset is not eastern Kentucky
in cultyre. As an ex-patriot[(:-)] 'hill-billy', I take exception to the
nonesense spouted by this loon. While Eastern Kentucky is backward (maybe too
backwar to have an advanced radio station of this type), and true they handel
snakes, and vote democratic, and are way to ignorant, even they have more
pride and smarts to accept this crap. I listen because they are funny. Much
like the old VOA and Radio Moscow (we will have to talk one day about the time
I got pulled over in Perry county while RM was on my radio, boy was that FUN!)
I wish I could access the banking reocrods of the outfits that "advertise" on
this station. I can not beleive that anyone could make money with the crap
that is being peddled.
Eastern Kentucky has many (maybe too many) real problems, let us not liable
them with things they are not guilty of.

I have seen a toy today made by tonka. It was a little radio controlled car that operated on 27 mhz. Did the FCC give permision for use of CB band to others like Tonka toys. I beleive that is where alot of those weird noised are coming from. I played with it and the remote bled on different channels. I guess the FCC is oking us to use linears now to get over the interferences frome toys and stuff like above. Who know how many other devices are using CB band. I have noticed that my CB did not seem to interfere with the cars operation. Seems kinda like the hams complaint that we are moving in on their space. Well now it seems like we have a similar problem. I guess what goes around does come back around. The hams should really get a kick out of this.

R/C on 27 mHz is nothing new.

Back in '58 when the FCC created the Citizens Band they set aside a number
of Radio Control (R/C) within the Class D CB channels. Both services were
able to co-exist without too many problems. Of course, back then, there were
fewer CBers, everyone ran 3-4 watts output and stayed on assigned frequencies.

It comes as no surprise that the first thing a keyclown thinks after finding
out he is sharing frequencies with another service is "I gotta get a linear
amp".

3204. CW & 11 Meters?

Newsgroup: rec.radio.cb
Date: 2001-05-27 12:51:28 UTC
From: kc2hmn@cs.com
Message-ID: <20010527085128.20622.00001281@ng-fp1.news.cs.com>
Source record: 83554

I recognize that this is a very knowledgeable group with wide and varying opinions. Lately, my fourteen year old niece and I have been practicing the code. At first, we used a single code practice oscillator in my brother-in-law's living room. However, since they live a good fifteen plus miles from our house, this can be somewhat inconvenient. What we did was use our legal CB's combined with the MFJ code oscillators to practice our code. I made mention of this on QRZ and got trashed for violating Part 95. Not a biggie, I've done that before...once or twice. I scoured Part 95 and could find nothing concrete to either support or forbid the use of CW on CB/11 meter frequencies as long as all other rules/regs are adhered to.

Anyone who has read my bio on QRZ knows I got my start in radio from an h/t. I seemed to remember that h/t having a Morse key and the code placarded on the front. It was an FCC type accepted radio, so reason stands that the commission has no problem with it. I recently acquired a FCC type accepted Sears h/t, manufactered by Pierce-Simpson, that also features a code key and the code placarded across the front. Like my old h/t, it comes with crystals for channel 14 or 27.1250MHz. I'm also including a link to an item on ebay that I recently bought. It also displays these features and is FCC type accepted. Any opinions or thoughts on the legality of this would be appreciated. I'd like to think that a feature like this could be a nice segue to amateur radio. I've heard no profanity or lid activity in my particular area on this particular frequency. My niece seems to like the code and thinks it's "way cool" because she saw it used on the movie Titanic. I already have a 10 meter radio gift wrapped for her (she doesn't know that) along with a straight key to give to her upon her successfully passing the Tech written and the code. Pretty nifty altogerther. Thanks for your responses.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1239945896

These Precors appears quite similar to the Sears unit, but I couldn't find any frequency info. I've e-mailed the seller and if they are indeed 27.1250MHz, I'll purchase them.

No body is moving in on anybody. Radio control devices have been legal for as long as citizen band has existed. That you just discovered this is interesting. Glad to see you are getting educated about the other services which surround your frequencies.

Happy Memorial Day. When I was growing up, it was a day of parades and speeches, and the history books taught us about this Country's heroes. ï¿½Then in the 70's and 80's, investigative reporters discovered that each of our heroes had faults and made his/her share of mistakes. ï¿½

Yes, they were human. But we still honor those heroes for exactly that reason--they overcame human tendencies and limitations to achieve something great. ï¿½And that's the lesson for today's generation.

I believe we have heroes in the making, today. ï¿½You and I rub shoulders with them at work, church, school, and in the mall. ï¿½From those who are seeking cures for cancer, to those who drive patients to their cancer treatments, everyday people are doing great things--often unnoticed. They are teaching right from wrong to their children (and ours). They are repairing flood-damaged homes in Eastern North Carolina, and they are building churches in Central America. Some take active roles in government; others work quietly behind the scenes to get things done. The list of today's "heroes" is endless. ï¿½It may be years before what they do is noticed. It may never be found out.

The United States STILL is a great country! ï¿½And it's because of its people. ï¿½Fly a flag this weekend. ï¿½And take a few moments to reflect upon those who went before us, setting a good example. ï¿½Take a moment, also, to remember those serving our Country today at home and around the globe.

God bless America!

Best wishes,
QRM

Annual Memorial Day Concert/Tribute from Washington DC ,
Sunday evening on PBS. Check local listings for time/station.

Since we know that these losers are posting from www.ynn.com and their support has little to say about the posts and off color comments coming from their servers, lets see how they like it if rather than just sending complaints to ynn.com we also CC abuse@pacbell.com, support@pacbell.com also. Upstream provides hate to have to clean up the act of their downstream yo-yo's who can't keep the mess in house.
Have at them guys!!!!!!!

I seriously doubt that some 300 milliwatt toy transmitter nestled
between the authorized CB channels is going to create the type of
interference as someone running even the legal 4 (as if!) watts
roaming around the 10 meter band...

>...IF is da key word!

Absolutely correct... you don't have to let them in without a warrant (which'll probably show up with a local law officer if requested)... AND you'll possibly face an NAL (aka a 'fine') for refusing the requested inspection.

Hi!!!

I could need some help on looking up a callsign.
I had a nice little chat with a person from Germany on 27mhz and I got his callsign that was DH14
I'm unable to find him on the internet or anything.
If someone can please help me I would be most greatful.

Thanks and 73's
Magnus, Sweden

What are you hams goofy thinking that CB is ever going to die it is allready
bigger than the both of you.
their are more illegal radios than you can shake your micro dick at.

Give up! it don't matter the splatter you are recieving is from california,
NY,chi town and every other hick town in US as well as mexico go to CB band
channel 6 and whine to them maybe they will listen HA!ha!.
if they can hear you with their alligator radio stations.

CB rules cannot be inforced nor can ham fcc just doesn't have the manpower.

If fcc fined and banned a indevidual for illegal usage that person would be
back on air within 24 hours their are too many friends in cb and if they
couldn't afford more radio equiptment their cb friends would give them all
they needed I would give my existing station. As is complete.

I know the hams don't have that kind of friendship.

QUACK! QUACK!
MUDDUCK#1 SAID SO!!

There was also a channel at 27.245, which is now channel
25, and one between 11 and 12.

I still have an old Controlaire tone/reed system out in the
garage.

Mike

Not only are there no names mentioned in the story (initials only) but the writers name and the publication name is witheld, too. Legitimate? We think not. Sounds like a bunch of people who know what they're doing is illegal but are trying to gloss over that aspect of it.

Gary Danaher <gdanaher@home.com> wrote:

Opps, I didn't author that and I forgot to put the URL with it.
What I posted is from:
http://pirateradio.about.com/gi/dynamic/offsite.htm?site=http%3A%2F%2Fwww.ge
ocities.com%2FHeartland%2FHills%2F3764%2Ffccfrau1.htm

Also go here and look into some other legal resources about the FCC
fascist:
http://pirateradio.about.com/tvradio/pirateradio/cs/legaltheory/index.htm

While the URLs posted aren't about CD radio they do cover the REAL
powers of the FCC under Constitutional law. And they only have the
power to "inspect" without a warrant if you let them.

Pinhead (or was it Curious Dan?) used to call it "phone fucking" when he
threatened to do it to Mark Fuller (or anyone else opposing illegal CB).
The whole NG more or less gave their approval by saying nothing about such
threats and intimidation at the time. Now the shoe's on the other foot.
You illegal faggot keyclowns deserve all the shit you're getting....and MUCH
more.

I wonder how dissapointed, cheated, disillusioned and shocked she'll feel
when she hears unlicensed CBers exchanging casual profanities on 10 meters.

If she can pass the Tech written and 5wpm code....she may as well take the
general written - and avoid 10 meters all together.

Rob, you appear to be lost. You've wandered into the US cb newsgroup. The people in here are mostly illegal outlaw cb gangster "posers". Need a replacement car antenna? They don't know. But if you need an illegal CB radio or a stolen car or some crack cocaine - they can help you with that.

There is a UK cb newsgroup (uk.rec.radio.cb?) that has the chaps you are looking for. Good luck.

oh brother. Let's see who is lacking is social skills. Why does a
person freeband?

- because he needs to talk louder
(reality: people quit listening to him because he is a dimwit)

- because he needs to talk farther
(reality: the locals are tired of his spew)

- because it's 'cool'
(reality: he succumbed to the peer pressure of morons)

- because the legal channels are too busy
(reality: nobody on the legal channels will talk to him)

- because he wants to exercise his freedom
(reality: he gets a charge out of breaking the law)

So you got a group of people that nobody want's to talk to. They spend
a lot of money on amps and mods so they can walk over the signals of
everyone that ignores them. In the process, they find a little support
group of other anti-socials that are doing the same thing. Instead of
talking to each other on the radio across the continent (a capability
they seem to be proud of) they hop on the computer and talk to each
other here.

"[T]hey have to be very sad people,no job,no woman,and have no social
skills in real life the computer is their life."

Check behind and under the seat for a nock out tab,you can place a boot around the coax or use some silicone to seal the hole up afterwards.If not tab is found,these are also a good "hidden" place to drill.

Sigh ... there are some decent folks on the newsgroup - really. However, I must point out this to you Mudduck#1 - I am finally going back on HF. I had an individual (Mike, W2OY) who, years ago, tromped on my qso with 1000 watts. I was running 65 watts. It bothered me for no more than 30 seconds. His signal was vastly stronger than the guy I was talking with. As I stated, it caused a problem for about 30 seconds. After that, I couldn't hear W2OY. Neither could the guy I was talking with. W2OY, however, was getting really upset. We were clobbering HIM. Hmmmm ... do what you want, but venture into 10 meters (or any other ham band) and I assure you, you can NOT bother me and I WILL bother you. 65 watts was able to give him fits and his kilowatt couldn't bother us. We continued for the best part of an hour. He was really squaking. Now, if my 65 watts could give problems to 1,000 watts, you are welcome to try and bother me when I am running 1500 watts. Go ahead, give it your best shot. Won't bither me a bot. Meanwhile, expect problems in return. 15,000 watts won't even be heard, I assure you. Go ahead if you wish, spend the money. How much time and money do you want to spend?

Well, what you do (assuming you put the antenna in the center of the roof) is take the trim off the inside passenger side of the roof, the top front of the door (or along the windshield), run the coax down the side of the cab, under the carpet, and punch a hole in the carpet in the center where the radio will be mounted. Assuming a stock rig, the power will be run from the fuse block to the radio. If it is a higher power radio, direct runs should be made to the battery. In any case, if you are not familiar with the operation, you're much better off spending the $60 to $80 for an install in a shop that does this sort of thing.

Kevin:
I'm afraid what the Bible says is true, in that what is in your heart is what you will SPEW. I don't think that Junior high (Middle School) kids talk this way--THE MEDIA DOES and promotes this activity! What I have said for years is true--people learn about the Sodomites and other reprobates on the TV or other media and then go practice it on the CB, Ham bands, or the newsgroup. Sodomites will call others what they ARE and think the whole world is QUEER. They don't realize that there are penalties for their vile postings and lifestyles. Hopefully they WILL REPENT before it's too late, when they find themselves in a LAKE OF FIRE with NO relief!!!!!!!!!!

Kevin, unfortunately, you are seeing a continuing 'flame war' between a couple of CBers and a couple of technician class amateurs. Hopefully, you will not judge either the CB community nor the amateur community at large by the actions of a few.

It shouldn't be a surprise. 27 MHz used to be an ISM band - in other words, all kinds of stuff (junk) shared the frequency. Not unlike 900 MHz today. The low powered stuff (such as R/C toys) needs no license - hmmm ... come to think of it the real low powered walkies had the cw thingy on them. They were ok since with such low power they would not cause a problem for the more serious users. The walkies have largely moved to 47 MHz (is it 47?) and a lot of the other junk has moved to 900 MHz and beyond. The problems is that there will always have to be room for cordless phones (whether spred-spectrum or not), baby monitors, remotes for automobiles, wireless digital cameras, walkie-talkies (whether FRS or others), cell phones, radio, television, hmmmm .... anyone care for total open game on any spectrum? I totally disagree with the tactics that Doug and others may use, but they just might be aware of something. Forget the FCC for a moment - you want to watch TV? Do you want to use your cell phone? Need a pager? Want that remote garage door opener to work? How about the remote for your car? Hey, how about the internet and international phone calls? A lot of this might be via 'radio' (satellite communications). Care to have your commercial air flight reasonably safe? The flight path mapped out properly for your pilot? Please think about it - carefully. Certainly before you need the police, the fire department, or an ambulance. You might care to consider that a lot of people depend upon sharing the airwaves, gang!

Of course not. The human race has been growing people for a very long
time, for obvious 'reanonts'. Oh, and by the way, Landshark's bisexual
postings are referenced and publically available, which is more than
you can claim about the evidence for your 10,000-year-old-Earth
theory. What exactly did -you- learn in junior high?

OT, I think there might be something more than a coincidence with all
the low-power stuff shoved around 47MHz. If the impedance of free
space is 377 ohms, then free space should also have a resonant
frequency. Skipping all the math, it works out to be 47.725MHz. Just
coincidence?

They can complain all they want about the restrictions on RF power and
frequency allocation, but when the system works in their favor --
perhaps to save their own pathetic lives -- they will become the FCC's
biggest proponent.

In Australia, 26.957 to 27.283 is an ISM band, and operation of non type approved transmitters up to 1 watt eirp is permitted under a class license. The class license covers such things as radio control toys and walkie talkies. The power output of the toys is probably in the order of a few milliwatts.

I imagine something like that applies in the US.

Similar, but with some exceptions. Very low power is permitted in much
of the spectrum, and there are some specific allocations for low power
radio control devices. There is one allocation near 27MHz that allows
use of something like 25 watts for RC only.

Yes, we live in a fast society that demand fast answers.

You don't want to hear any of
> the reasons behind it,

actually yes I do, just not the shitty remarks put in a context of arrogance
that some have diplayed on this group.

and you don't want to learn anything you don't
> think you need to know.

Sometimes, but I still end up having to learn them in order to progress.

You want it, you want it now, and you don't
> want to pay for it.

Cant blame anyone for that. Allot I have paid for allot and allot has been
shared with me from freinds. I am a reasonable person and have shared my
knowledge with anyone who has a earnest desire to learn. I have never kept
what I know a secret in fear that someone will learn more then my self or be
a equal to me. Knowledge comes in degrees and is imparted as such, but dont
think I will cast pearls amongst swine. Knowedge should be free, the labor
of applying it where one pays for it.

Do you think people like me spend years in college
> just to do your thinking for you? Wrong.

Perhaps not, thats there choice. No one says anyone has too. Either answer
the question or not thats there own personal choice, but dont blame a person
for asking.

Well thanx for your helpful advise, I hope I don't get a check in the mail
for it.
The box has never ran hot. If there was a problem of a short then the
balancing resistors across the combinors would get hot indicating such. I
believe I need to go back and get each 8 pill section working first then tie
them together. I probably have to play with the input capacitance and
transformer wraps to bring the impedance up. If I get things right and
anybody wants to know what I did, its gonna cost ya big guy ;)

It all depends, there is a thing called take off angle of radiation. A
antenna can be loaded and out perform a long antenna because of this.

> >All mobile and base transmitting antennas need counter-poise, more
> commonly
> >called ground plane.

This is incorrect, have you ever heard of a center fed dipole. The angle of
the ground relative to the radiator changes the input impedance, but what
better ground then earth or water. You guys are really starting to make me
wonder about you.

KRS

>I'm looking for a good voice-changing microphone.

Any microphone can change your voice. Here is the procedure for a handheld D-104:

(1) Swing mike on end of its cord.

(2) Divert swing so that mike hits you between your legs.

Voice will return to normal in a few hours.

Not necessarily -- if the resistors were intended to allow a
substantial amount of RF current, they should be able to handle an
equivalent amount of DC current as well. It also depends upon the DC
resistance of the shorted transistor (assuming that's the problem)
which will not necessarily be a complete short.

My biggest question is why you can't seem to pin down the problem,
since these are -really- simple circuits. Are you troubleshooting this
box using logical procedure and test equipment, or are you using the
'force'?

> I believe I need to go back and get each 8 pill section working first ...

I believe you have a lot to learn. Let me know when you are ready for
the second lecture on impedance.

Any imbalance and those resistors are a dead give away. There doesn't even
have to be a short. Come back to the real world.

> My biggest question is why you can't seem to pin down the problem,

There's no problem just a question. My original question was mostly "how to
raise the input impedance", thats it. All I use is common sense, nothing as
extravagant as you describe.

Jon, you have some of the makings of a loony illegal troll 1st class. You may even approach the level of twistedhed. Allow us to offer a few suggestion:

* Blame the government for your illegal actions.
* Make up facts and then say they are true just because you say so.
* Brag about your cruelty to animals or small children.
* Have fantasies about being a rock star or a journalist.
* Deny your obvious homosexuality by fabricating quotes from an imaginary psychologist friend.

I didn't say 'imbalance'. But the real world is that I have fixed
dozens of solid-state RF amps and a couple hundred audio amps, and I
have seen this happen more than once. In fact, I've seen some problems
that didn't even make any sense. There's no such thing as a 'dead
give-away', because once you locate the obvious problem, then comes
the failure analysis to identify the cause so it doesn't happen again.
Ever see a shorted resistor? I didn't think it was possible either,
but the little turd is sitting on the shelf in front of me to remind
me that nothing is ever obvious.

Your combiner should be bringing up your impedance. It isn't,
therefore you have a problem.

Earth can be a very poor ground as far as RF is concerned. Ground as far as RF is concerned may not be and usually isn't at ground level, it is usually some feet below ground. Exactly where the RF sees "ground" is dependent upon several things, such as soil condition, and frequency to name a couple.

Gawd I hate to ask the question .... how did you arrive at a resonant frequency for free space? Please consider, unless the Q was so ridiculously low as to render the question moot, frequencies far removed from 27 MHz would not pass for any distance. Considering that most of us have no problem seeing from light emitted from the sun some 93,000,000 miles away, I rather suspect that there is no resonance involved in free space (light is an electro-magnetic wave, albeit at a much higher frequency).

It is similar in the US, but I just don't particularly feel like looking up the regs. I also suspect an earlier thread about the legalities of CW in the CB band is rendered moot by exactly what we are discussing.

To all the ones that were not tying to be rude thank you for the info. I have not had very many R/C toys and the ones I have had worked in the 49 mhz range. As for the others if you cant say somthing nice then dont say anything at all. I would like it very much if you put me in your kill file if you dont want to hear my stupid questions.

Thanks.

We are talking about input impedance man! therefore called splitters not
combinors.
a splitter provides two signals at its output, the signals are 180°
out-of-phase with each other. Generally, one of the signals will be in phase
with the input. This has nothing to do with " bringing up the impedance" as
you described.

James:
Honestly Im not getting into any key down contest with any idiot that has to spend a bunch of money for more power.
I run a stock radio with a antron with the 5/8 addon tip and ground plane.
RS TRC-483 with rg-58 for coax.
SWR is dead on 1.
It is more benificial for me to outwitt my opponant by keying on his RX than key on his TX. If I don't wan't to talk I can allways turn it off.
So if you are trying to rate me with the illegal radio thing.
Forget it Im not running one. The best amplifier is a better antenna. You should know that.

I am sure that there are good people here as well as in CB.
What Im not understanding is why everyone in this group
hates the illegals it don't bother me none. If they wan't to take the chance at getting the fine etc. That is their biz.
The hams are forgetting about the diesel dummies with all the power and modified 10 meter radios knowing they are going to be gone in a hour anyway

Piss on it! Why should I waste my Quacking time on a worthless piece of shit that will more than likely die from a RF induced brain tumor assuring me plenty of air time in the not so distant future.

Go ahead kick it up turn it on hear the hum of the power supply as you key your 15,000 W amp.
HA!HA! HE!HE! ooohYEAAAA QUACK! QUACK!
It's not the radio it's the nut at the key He! He!
MUDDUCK'S Rule!!

>you described.

The splitter has everything to do with input impedance. It is part of
your input signal path. On most SS RF amps the splitter is a ferrite
transformer which not only splits the phase but reduces the impedance
low enough to be used by the transistors. Just like anything else, if
you wire the inputs in parallel, you will lower your input impedance
(all else being equal).

You haven't really given much detail on the design of this amp, so any
question about it is going to get a very general answer. But while I
would assume that even you aren't stupid enough to try this, I have to
ask: Are you taking a pile of amps and just hooking them up in
parallel?

I must have missed this one, thanks for quoting it.

An antenna that is unbalanced, such as a 1/4wave vertical, requires a
'counterpoise', which can be either real ground or an artificial
ground. It is just something for the radiating element to 'push
against'. The best counterpoise -- or 'ground' -- is something that
can be argued about for years, so I will not offer any opinion except
to say that the best ground is the one that works.

<j.r.hampton@worldnet.att.net> wrote:

>Gawd I hate to ask the question .... how did you arrive at a resonant
>frequency for free space?

I'm glad you asked that question:

Free space has a characteristic Magnetic Permeability of 4*PI*10^-7
Wb/Am, or 1.2566 mH/m. It aslo has a characteristic Electric
Permittivity of 8.85 pF/m. That's where the 377ohms impedance comes
from. Now plug those numbers into the formula for LC resonance;

1/(2pi (LC)^.5) = 47.7247... MHz

Cool, huh?

> Please consider, unless the Q was so ridiculously
>low as to render the question moot, frequencies far removed from 27 MHz

>problem seeing from light emitted from the sun some 93,000,000 miles away, I
>rather suspect that there is no resonance involved in free space (light is
>an electro-magnetic wave, albeit at a much higher frequency).

I don't think resonance and propogation are the same thing. Sound can
propogate through a solid object, even if is not at the resonant
frequency of that object. Resonant space is an interesting idea, but I
can't take credit for it. Rick Anderson, KE3IJ, thought of it first.

Having spent 18 years in Central Wisconsin, near Project ELF, I can sure testify to bad grounds. ELF is there because the planet is the antenna and they don't want to short out the feedline.

Dipoles worked admirably at heights where there was a strangulation hazard while a vertical could be built in a swamp for all the good it did.

mobile

They make abtebbas with 5/8 written on the shipping carton. Whether they actually perform as 5/8 is another issue entirely. The CB community has been sold any number of dead horses and I suspect this one died on the way to the glue factory.

The 5/8 is something of a myth in any case. In theory, a 5/8 radiator has the lowest angle of radiation of any vertical (although not enough different from 3/4 to buy lunch) and because it requires a loading coil to get to resonance the coil can be tapped to 50 ohms for the SWR freaks among us. It accomplishes this bit of wonderment at the cost of being impossible to decouple from the coax. Some do not view this as a major acomplishment.

As 23 foot radiators on a coil do present some interesting mechanical problems, what are being sold as 5/8 are in fact loaded antennas whose ultimate resemblence to a real one is questionable at best. Why do I have the feeling these are helical dummy loads designed primarily to impress the living shit out of an SWR bridge.

wrote:

>Ok I have a question.
>Was the freq's free before mankind developed the ability to build a radio?

No, -because- mankind had not yet developed radio. It can't be free if
it is inaccessable.

Consider the origin of the term 'freeband'. Free from what? It's not
free from legal restrictions. The equipment isn't free. There is
nothing 'free' about it. The pirates coined the term for themselves
because by operating illegally they would 'free' themselves from the
licenses, the code tests, the power limits, the frequency and
modulation restrictions, the social standards, the profanity filters,
and everything else that they consider to be too much of a challenge.

>Another if you don't mind.
>Could mankind build a radio to transmit on the freq of say a brain wave? You

The brain pan does have a resonant frequency, around 375MHz.
Pulse-modulated microwaves can be heard as voices coming from your
head. There is an extensive study at Laurentian University by Dr.
Persinger, who can achieve altered states of consciousness with
electromagnetic stimulation. These are places to start.

3367. New SkyWave to be Released...

Newsgroup: rec.radio.cb
Date: 2001-05-28 13:09:15 UTC
From: bgriffey@core.com
Message-ID: <8d83b042.0105280509.4a8fd0dc@posting.google.com>
Source record: 83716

A brand new SkyWave amplifier will be released within one month.
It features:

High quality (G10 with solder mask) custom designed PC board
Extra large heat sink (black)
Strong 1/8" thick aluminum chassis (black)
Detachable power cord
High efficiency class C for AM/FM Operation
SO-239 interface
(2) 2SC2879 configuration

It may also be offered in kit form. Feel free to email me with your questions.

How about an amp for sidebanders? Class C sucks for being truly linear.

Of course it's 1:1. RG-58 has so much loss, the reflected wave never
makes it to your meter. Measure SWR at the antenna and get back to us.

How are you going to get linear operation from a Class C amp?

Linear, as applies to an RF amplifier implies that the signal going in looks the same as the signal going out except for amplitude. It also has to do with delta changes in output from delta changes in input. 99% of the operating area for this class C amplifier is in its linear range. The other 1% is an operating area extremely low in the output of the amplifer and will never be encountered in normal operation by a driver in the 0.5-4W range. I hope this answers your question.

>
> How are you going to get linear operation from a Class C amp?

No matter how many modules your amplifier has... it should always have
50 Ohm port impedances. With what? and how are you making these
measurements?

Glad to see some of the old folks here. It's interesting... some of the people that were causing the most problems a year ago now seem to be trying to moderate the behavior here of new troublemakers. This newgroup doesn't change over time... just the players. In any event, I hope to carry on some good conversations here without getting into too much mud-slinging...

You are correct that class C operation is not recommended for SSB operation due to the SSB carrier dropping to zero during unmodulated periods.

Although a version of the new SkyWave has not been planned for SSB at this time... a class AB version that would accomodate SSB operation is not totally out of the question for the future.

Not really. If the amp is Class C then it is operating at less than
180 degrees. It will sound nasty when the modulation of the input
signal forces the output to exceed the bias cutoff. Have you
determined the maximum modulation possible before cutoff?

Another question: Since Class C amps always have some distortion, how
is the output filtered? Has the amp been tested for harmonic
attenuation?

3400. AC Competition Question

Newsgroup: rec.radio.cb
Date: 2001-05-28 18:25:12 UTC
From: castlecra@aol.com
Message-ID: <20010528142512.09502.00001574@ng-cp1.aol.com>
Source record: 83747

There are Three classes (that I know of), for AC Vehicles.
The "AC 1 ALT", "AC 2 ALT", and "AC SKY". I have been told that you can't run DUAL-STATOR Alternators in the "AC 1 ALT" class. I am planning a setup to compete in the 1 alternator class, consisting of a Rebuilt/Upgraded GM alternator (160 amps), AND a 300 Amp Powerline alternator wired for 3-phase AC. Would this setup be able to compete in the "AC 1 ALT" class, without breaking any of the "KEYDOWN" rules?? By the way, the vehicle is a 1985 Chevrolet Silverado pickup-- with a 350 crate engine (forged crank/pistons). The truck has an Aluminum camper shell, with dual-hot 9' fighting sticks, and Andrew Heliax Cable, and Hardware. I run a 1X2, into a Competition 8 pill, that I will use to push a 3cx3000a7.. I hope the 1 ALT class, is where I can be...
Thanks for the Help.....

Well, sort of. One of the other reasons the term 'linear' is used is that the device is used in the portion of the curve that is more-or-less a straight line. No device I know of is linear near cut-off or anywhere near it. In the days of Class B modulators, etc operating in jerk-shove it was customary to bias a bit below cut-off to minimize 'cross-over distortion' which tho it was >in an operating area extremely low in the output< was audible as hell.

And an Ancient Modulation signal is well known to have four times carrier power at peak. The top of the operating curve lacks linearity as well as saturation is approached. This is solved in a number of ways ranging from simple linearity detectors to Automatic Level Control. This resulted in most tubes used in modulated service to be set up differently from FM, FSK, etc. service, generally lower in the curve. In linear service, steps were taken to back off from overdrive conditions by methods mentioned above.

You may have overdesigned for 4 Watt drivers but you will find that if one makes it idiot-proof, Mother Nature comes along with a bigger idiot.

(PLEASE RESPOND BY EMAIL, since I don't check newsgroups very often.)

I have a dead EV 664 microphone that I'd like to resurrect. Does anyone have (or know where I can find) a reasnoably priced replacement cartridge for this microphone?

I've already called EV to see if they would honor the microphone's "lifetime warranty", but they told me that the "lifetime" of the microphone is 10 years after the end of the model's production, and parts are nolonger available.

Please respond by email.

> (all else being equal).

Sparky we must be talking apple and oranges so lets just leave it at that.
Apparently I will assume the amplifier design your familiar with is
different than mine, for that I will excuse your seem to be ignorance. The
splitters we use is to split the signal not change the impedance to match
the device. If the splitter has the wrong ferrite mix and wrong amount of
turns this will change the input impedance as you described. If the
splitter does change the impedance then there is a problem. As I have
mentioned already in my past post the impedance is reduced from 50 ohms to a
just 1or 2 ohms through another ferrite transformer other then the splitter.
Nuff said, lets be done, end of conversation. Lets not waste any more
bandwidth then we need ;)

I have done this with a analyzer, if I use a bird watt meter it doesnt take
in acount of reactance.
Thats the problem, its tuned for low swr but its still not were it should
be.

What I have heard of some folks of doing is using a milli watt slug and bird
meter and some how shunting out the tank circuit or transformer so that you
can tune the amp with out the transistors in it. I would mind trying that
technic but I still dont know enough about it.

I suppose he could be running at 1.00001 times cutoff, but that would
be no better than Class B and require some really tight regulation. It
would still make some serious noise at the zero crossover, and using
those low-impedance pills, the output filter isn't going to have
enough Q to smooth it out. Or he could be running it Class BC, which
would keep it in the flat, but then he would need a way to reduce the
modulation on the input signal (read: not).

If you notice... A number of the inexpensive R/C cars
that have the capability of 'racing' are sold as compliments
with one in the 27Mhz area and one in the 49Mhz (or
wherever it is) area. (You can't have two cars in the same
band or they will interfeer with one another. Unless you
start putting MUCH better quality receivers in the cars.)

Jon, on second thought, you should try for a "Dave and Debby" personality.
We think you have the makings of a Newsgroup Nutcase, classic style. Suggestions:

*Use weird terms like "the 1-40 band".
*Work god or communism into your posts.

"Jon" <jon1968@mail.com> wrote:

Well scott frankly I'm not going to check the SWR at antenna It is un
necessary. As long as the radio is happy I'm happy. I have been doing this
for quite some time. trial and error always has ruled
for me. rg 58 with what ever loss you would prefer always gives me a
stronger,cleaner signal. and believe me I need all I can get. I'm so
dedicated to rg-58 I run it in my mobile. I have confirmed the difference at
a distance.
Use whatever you want it is your station.

We now know why your amps have never made it. Your statement,
"The other 1% is an operating area extremely low in the output of the
amplifer and will never be encountered in normal operation by a
driver in the 0.5-4W range" does not even apply to how the
distrortion is caused when using a class C amp.

You say your amps are of the highest quality? You must be talking of
parts only, because your theory of class C and distortion is flawed,
and because of this your amp is flawed. How can a flawed amp be
high quality?

>>
>> How are you going to get linear operation from a Class C amp?

The lack of tank Q in these circuits is probably the greatest weakness in
them. Even in VHF FM Class C circuits there has to be unidirectional

couplers and usually some selective element or with B+ on all the time one has merely created a very large mobile broadband mixer.

>KRS

That's fine, but I still think I had a fair and reasonable question:
What prompted the idea to run all those pills when you can get 1.2kW
using just three? And for less than half the cost and a fraction of
the size? You can use an MRF148 as a pre-driver/splitter followed by a
pair of MRF154 finals to get 1200 watts PEP with just a couple watts
in. Or if you want to stay bipolar, use a pair of PT9798's for the
predriver and MRF430's for the final, which will get you in the same
ballpark. It seems that using all those pills and associated hardware
is like trying to build a supercomputer from a pile of calculators.

Tell ya what: I got a pair of used 4X150A's that I'll let go on a fair
trade, sockets and chimneys not included. These are some of the
smallest tubes of their kind, and the pair should get you about 600
watts. Larger tubes have the same pin configuration, so if you design
the amp with that in mind, all you need to do for more power is just
upgrade the tubes. And if they burn out, it takes less than a minute
to plug in a new tube. Slick, huh?

At least it would get you away from the addiction of 'little pills.'

Well, to be honest, I really don't get too worried - unless someone unlicensed gets into the ham bands. The 10 meter excursions have, apparently, become a problem. I have not been on HF since 1969! I let my tickets expire around 1980 and decided to get back on in 1993 and simply tested out (gawd, I think that was close to 3 hours!). I've simply been up on UHF since 1993 and have been looking to get back on HF. My point was that there are far more effective modes than even SSB - and it doesn't take much to get past an am or ssb signal. Your point on the antenna is absolutely correct. One could have gobs and gobs of power - but, if ya can't hear 'em, ya can't work 'em! As far as the power vs mode, PSK-31 comes to mind. With DSP filtering, I believe it would be possible to have a 50 Hz bandwidth on the receive end and never even hear the other station. Additionally, although we consider the audio passband as 300 to 3000 Hz, the frequencies of the voice with the largest amount of power do NOT contain most of the information. This means you position your PSK-31 for the frequencies containing the maximum information (and less power). Under these conditions, it is doubtful the PSK stations would even hear the high power SSB or AM station; meanwhile, back at the ranch, the high power station would have these nasty warbling signals positioned right where his maximum information is (or was) contained. Actually, I am looking over some rigs in the low $2,000 range. This would not be high power; I rather suspect it will be a very normal 100 watt station. My biggest concern will not be a linear (I ran phone patches from Guam Island running 100 watts at times). I will really be pushing to try and come up with a decent antenna for the lower bands that will fit on my city property (this is NOT going to be easy - I used to joke about my 1100 foot windom antenna back in the 60s, but that thing put out a fantastic signal on 160, 80, 40, 20, and 15). Forgive me if I mistook you for someone running 5,000 watts or more that thought he was going to jump just anywhere. I pretty much believe in live and let live. You will NEVER see me making some of these posts which boarder on porn. Quite honestly, the guys around here are in general much more intellegent than the one or two individuals making such posts.

Well, RG58 has a loss a bit over 6 dB per hundred feet at 27 MHz (6.3 dB on 28 MHz). So, how much coax can you have in a mobile installation? 10 feet? Then the loss is 0.6 dB, not enough to ever notice! The times this becomes important is if you are running high power (then the limits of the coax have to be watched), the run of coax is long (say you have 80 feet of coax running up a 60 foot tower), you are running a high SWR and using a matchbox at the rig (in which case the SWR is still high in the coax - often this may mean you don't want to run coax at all, rather ladder line), or you are running VHF/UHF (or any various combinations of the above). Usually, with a tuned antenna and the run is short, who cares?

Agreed, and these external LP filters don't get half of what they
claim. If the output transformer was wound to bring the impedance up
to at least 300 ohms then tank it back down, that would work much
better. That point could be tapped to provide an optional balanced
output ... er, 'interface', for using twinlead.

From: Reporter <reporter@report.com>
Message-ID: <3b12f090$1@news2.mibx.net>
Source record: 83833

(UPI) Tiny rulers came out all over the USA as fags measured each others penises at "keyclown" events.

Keyclowns earned their name as "clowns" who attend "keydowns". These special events are where illegal fag CBers see who has got a bigger penis than who. Low brainpower and high criminal potential is the common denominator of keydown enthusiasts.

"It's an important sport" says keyclown FagLips, "If I have a bigger weenie than the next guy, it makes me feel good". Other keyclowns simply opt for anal sex and fellatio. "It's what illegal CBers do for fun", adds Faglips.

Well you won't have to worry about me surfing the ham bands I got 40
channels and I have pretty much cleaned them up locally except the ocasional
diesel dummy.
which usually leaves with his tail tucked.

Im not into power or long runs with coax geographically Im about center of
town and elevation isn't a problem.
Im quite happy with my rig.
My radio is happy Im happy what else could a CBer wan't.

This unit is ONLY a SSB Linear and is mainly a HAM unit--works LOUSY on CB.
Boat Anchor on CB ! SO FILTHY MOUTH REPENT !!!!!!!!
Dave!!!!!!!!!!!!!!!!!!!!

Nothing wrong with posting it here. After all, the hams that visit
this group do so with the explanation that they are CBers too. If
that's the case then the amp should be advertised here as well
as any ham group. Duh.

>DO YOU THINK I GIVE A QUACK'S ASS WHAT
>fcc IS DOING!!

You're the one who brought up enforcement, Son. You have no radio station. Why would you care what the FCC does? It DOES matter to others, my friend. And most people are now aware of how the "system" works when they nail you. I simply wanted to drop some accurate information into this rumor pool.....

>Get a life you lame aol'er.

How pathetic. Want to quack about ISP's? I have three. Besides AOL, I have RoadRunner at the house. And at my office, 1.4 miles away, I have a T-1 with New South. AOL is used as a buffer and because it is the best browser for USENET discussions. I just log on to any of my six accounts and I can glance at a Menu showing where (and how much) mail is waiting anywhere on the system. It also has a great Killfile, for which you are a candidate.

That is not really true. Class C amps can be linear at the output.
Even though the amplifier itself has inherent distortion operating in
this mode, the output Q can be sufficient to allow a linear signal. I
have observed my amplifier many times on scopes and have a very linear
signal at the output. This is commonly done and the reason class C is
used is for its high efficiency (70%+). This amp has been tested on an
HP spectrum analyzer with the following results:
2nd harmonic -27DBc
3rd harmonic -29DBc
These measurments were taken at a 130W carrier.

That I would like to see, since even a high-Q tank can't significantly reduce the audio distortion caused from a Class C operating over bias. What is the Q of your output stage?

> I
>have observed my amplifier many times on scopes and have a very linear
>signal at the output. This is commonly done and the reason class C is
>used is for its high efficiency (70%+).

The gain in efficiency is made at the expense of linearity. This distortion will occur regardless of the output filter, simply because of the nature of a Class C amp. Any filter can only remove the distortion that occurs within the limits of the filter, and any filter that can remove the distortion occuring within the sidebands would render the amp useless, because it would be removing the modulated audio as well.

> This amp has been tested on an
>HP spectrum analyzer with the following results:
>2nd harmonic -27DBc
>3rd harmonic -29DBc
>These measurments were taken at a 130W carrier.

An unmodulated carrier will not give you any indication of linearity, and your harmonic suppression numbers are not that great. At the very least you should be 60dB down at the second harmonic. Have you two-tone tested it?

Here's the deal: when I see somebody say that they have a Class C linear, I can't help but think of a wingless airplane. While exceptions do exist (such as the Class BC amp), you seem to have built an amp using a design that has eluded engineers since the beginnings of radio. In other words, you have made an extraordinary claim. All I am asking for is the extraordinary explanation or proof to support the claim.

The only thing "growing" about the human race, at least for much of it, is its technology. Socially we haven't progressed much since the beginning of recorded history. We still wage war over territory just like we did thousands of years ago. The only thing that has changed is the method. Now instead of killing one person at a time with a rock or a sword we can kill millions at a time from 5000 miles away with a missile.

As for the Earth being billions of years old vs. thousands you have as little or less objective evidence than I do. Your theories say that you can date a rock by the ratio of isotopes. This can't be done unless you know the composition of the rock originally. Since there were no people back when the rock was formed "billions of years ago" you can't make that determination. So your dating methods are theoretical. This is the same dating methods that tell us that a mammoth found in northern Siberia is from 15000 to 55000 years old (depending on what part of him you date). That's a pretty wide margin for error, eh? How is it that some rocks can be billions of years old and some only millions of years old? Were some rocks added later? I don't think so. All of the rocks on the earth are exactly the same age.

As far as Landshark's bisexuality goes, so what! If he wants to be a reprobate let him be. "Well he started it!" Well, you perpetuated it. Yes, this is children's band.

-What is Twistedhed?-

(Some General Ideological Features)

by Prof. Matthew N. AntiKeyClown

I am skeptical of efforts to produce a "definition" of twistedhed. As a historical aberration, twistedhed has taken many different forms, and has evolved dramatically in some ways. To understand what twistedhed has encompassed as a foul-mouthed redneck, we have to look at his early newsgroup doings in response to Mark Fullerism. The following paragraphs are intented as an initial, open-ended sketch.

Twistedhed is a form of extreme right-wing ideology that celebrates the cb hobby as an organic community transcending all other loyalties. It emphasizes a myth of national or racial rebirth after a period of decline or destruction. To this end, twistedhed calls for a "spiritual revolution" against signs of moral decay such as individualism and materialism, and seeks to purge "alien" forces and groups that threaten the organic community. Twistedhed tends to celebrate masculinity, youth, mystical unity, and the regenerative power of violence. Often, but not always, he promotes racial superiority doctrines, ethnic persecution, imperialist expansion, and genocide. At the same time, illegal cbers may embrace a form of internationalism based on either racial or ideological solidarity across national boundaries. Usually twistedhed espouses open male supremacy, though sometimes it may also promote female solidarity and new opportunities for women of the privileged nation or race.

Twistedhed's approach to politics is both populist--in that he seeks to activate "the people" as a whole against perceived oppressors or enemies--and elitist--in that he treats the people's will as embodied in a select group, or often one supreme leader, from whom authority proceeds downward. Twistedhed seeks to organize a cadre-led mass movement in a drive to seize state power. He seeks to forcibly subordinate all spheres of society to its ideological vision of organic community, usually through freebanding, Twistedhed uses mass organizations as a system of integration and control, and uses organized newsgroup violence to suppress opposition, although the scale of violence varies widely.

Twistedhed is hostile to Marxism, liberalism, and conservatism, yet he borrows concepts and practices from all three. Twistedhed rejects the principles of class struggle and workers' internationalism as threats to national or racial unity, yet he often exploits real grievances against capitalists and landowners through ethnic scapegoating or radical-sounding conspiracy theories.

For those that are not familiar with a Class BC amp, here's a brief description:

It is a Class C amplifier, but the input modulation is reduced to the point where the amplifier bias stays below cutoff. The result is that the input is modulated at, say, 70%, but the output is %100 modulated with no distortion. It's a very neat trick.

The obvious problem is that the radio needs a modulation limiter. Most CB radios will peak at 90-100%, and don't have a modulation control that is easily accessible. Many radios have their modulation limiters disabled. This makes external Class BC and C amplifiers both impractical and unmarketable for the CB.

Which can easily be deterimined by a quanititative analysis of the
products of radioactive decay. But by your own argument, the earth
isn't any older than recorded history. This is the same as saying that
nothing exists unless it can be witnessed. Have you checked the light
in your fridge lately?

Perhaps your definition of 'recorded history' needs some modification.
There are 'fossil' records, 'geological' records, 'astronimical'
records, etc. These records have proven to be much more reliable and
accurate than 'human' records.

> So your dating methods are theoretical.

If the sun has risen every morning for thousands of years, it's a good
bet that it will rise again tomorrow morning. Predictability based
upon hard data is not only theoretical, it is logical.

'Intent' doesn't win wars. And if someone claims to me that they are
an astronaut and that the earth is flat, you can bet that I'm either
going to make them prove both claims, or prove them to be a liar.

But as far as my comment about Mt. St. Helens, it was just idle
chatter and had nothing to do with the point Scott was making in his
post. I'm sorry you couldn't see that. Try turning down the
sensitivity on your troll-o-meter.

> Now they are going to be junior geologists, too?

I don't think Scott was claiming to be an expert. I made the comment
simply because I had to wash the ash out of my hair for six months.

That brings me to another topic. After the sun got blotted out and the
ash started falling, it was the CBer's that were doing all the
emergency comm, not the hams. Ever since then I have had almost no
interest in Amateur Radio. But now it seems that there are many more
hams than in those days. Have emergency communications by hams
improved since then? I've heard about RACES, but I don't know how well
it works in reality.

The fact is that since this amp is only one diode drop into the class C area... the linearity is very good. I agree that if you go deeper into class C that the distortion become unruly and extra measures must be taken to re-shape the signal at the output. This amp sounds excellent on the air when operated below the compression area. I think what most people associate with amp usage is the fact that most folks ignore the fact that improper drive levels (too high) will put any amp into the compression area and will sound distorted... regardless of class of operation.

Professor, re-read your post, you are offering it in kit form which is still illegal, althougth you did not actually use the word For Sale, we were born at nite but not last nite. I think illegal keyclown may have a point.

A brand new SkyWave amplifier will be released within one month.
It features:

High quality (G10 with solder mask) custom designed PC board
Extra large heat sink (black)
Strong 1/8" thick aluminum chassis (black)
Detachable power cord
High efficiency class C for AM/FM Operation
SO-239 interface
(2) 2SC2879 configuration

It may also be offered in kit form. Feel free to email me with your questions.

> it works in reality.

Short answer, depends on the locality and the emergency in question. Like
any other networking operation it depends on a net control who learned his
management skills from Attila the Hun or on a group who have done some
things together before which usually means a resumption of the OT vs
Codeless Tech wars during or shortly after the emergency.

The CB bunch actually has a frequency advantage because the optimal freq for
earth to earth communication is about 35 MHz (the hiway patrol isn't there
for nothing) but suffers from skip and Ancient Modulation. In ancient days,
6 and 10 were the bands of choice with the edge probably going to six.

So for what you describe, it is no surprise that the CBers did the work if
the Amateur alternative was 2 meter FM. Out here where the skies darken,
lightning strikes and whole towns blow away CB is about as useful as a third
tit and not nearly so decorative.

RACES is an antiquity these days with only 196 licenses in existence, two in
the Spokane area where I gather you live. The RACES call signs are prefixed
WC -- which if nothing else spared the Amateur Service from a prefix that is
the universal symbol for a toilet. The organization is a lot different than
RACES rules contemplated and RACES was abused by the Public Service types

who viewed it as a way to get a secret frequency for the drug squad.

Again, local conditions vary and you may have a well-organized bunch for all I know but I doubt if things have changed a whole lot since your initial experience.

Yes, all the rocks are the same age. All the material in these rocks is the same age. Just because the lava came out of the mouth of the volcano "yesterday" doesn't mean it's "new" rock. If I take a piece of basalt or granite that you say is a billion years old, melt it with my acetylene torch and let it cool do I have a new rock or is it the same material that was in the old rock? Does this make it old or new? The earth is a master at recycling "old rocks" into "new rocks." But the material is all the same age. You still didn't explain to me how you can take a rock with a certain isotope ratio and determine the age. You can't know what the original ratio so you can't make an accurate age estimation. It doesn't matter if you are using Uranium/Lead or Potassium/Argon dating, there is no way to know the original ratios.

> Did you pay attention in Geology class? Some rocks are only days, or
> hours, or minutes, or even seconds old. If you don't believe me, go
> jump in a volcano and see for yourself.

Yes I paid quite close attention, I live near one of the most geologically diverse areas of Texas. Within fifty miles I can visit a reef, a dry lake bed, eight types of limestone, an earthquake fault, and granite batholyths that contain some of the world's only truly blue quartz. It's called Llanite, if you want some I'd be happy to send it to you. It polishes up wonderfully!

So are new atoms created in these volcanos? Nope. As I stated in another message....according to your reasoning I can take a piece of basalt or granite considered to be a billion years old, heat it to the point of melting, allow it to cool and I have a brand spanking new rock. If you date a rock by how long it has been solid then yes you may have some rocks that are older than others. If you date the materials in the rocks they are all the same age. Since there is no way to tell the exact ratio of these various isotopes when the rock solidified there is no way to accuratly date the rock using radiometric dating.

Actually you are correct, you should be able to run almost 99%
modulation into it without distortion. But since you are only moving
the cutoff 0.7volts, then for all practical purposes, it is operating
only Class B, isn't it? The only real advantage in efficiency to that
design is the minimized quiescent current. Have you compared the
efficiency curves for the same amp biased for class B or AB? How much
difference is there?

> I agree that if you go deeper
>into class C that the distortion become unruly and extra measures must
>be taken to re-shape the signal at the output.

It happens because of the zero-crossover point, as Dick pointed out,
and not because of how 'deep' you go into Class C.

> This amp sounds
>excellent on the air when operated below the compression area.

Compression area? This amp has RF compression?

> I think
>what most people associate with amp usage is the fact that most folks
>ignore the fact that improper drive levels (too high) will put any amp
>into the compression area and will sound distorted... regardless of
>class of operation.

It's true that modulation should be limited to 70% average and 100%
peak, but beyond that is not a 'compression area', it is an area where
the RF is 'clipped'. A Class AB push-pull can reduce the effect of
clipping, but a Class C only amplifies it. That's the nature of a
Class C amp, and that's why it is not used as a linear amplifier.

Using your own descriptive terminology, a Class C amp can cleanly
amplify only a limited amount of modulation, and that depends upon how
'deep' you are going into the Class C range. The 'deeper' you go, the
lower the input modulation must be. Since you are not going deep at
all, then you are sacrificing the efficiency of a true Class C for
linearity, and even -you- have recognized that tradeoff. But even if
you run a true Class B you will have some crossover distortion when
modulation peaks above 100%, which occurs more often than most people
think it does.

Have you run your amp through the distortion analyzer at 100% or more modulation? Two-tone modulation? Have you compared distortion with the same amp biased for Class B or AB? Can you post some comparative numbers from actual efficiency and distortion tests that can be independantly verified?

Twistie must have taken out a mortgage on his trailer-home so he could get a vocabulary book. His use of these expensive words shows only a superficial understanding of their definitions, and their marginal applicability to the topic demonstrates a lack of experience in their usage. He needs to get his money back.

Yep. You are not creating or destroying matter, you are just changing
it's form and/or chemical composition.

> Does this make it old or new? The earth is a master at
>recycling "old rocks" into "new rocks." But the material is all the same
>age.

If you are saying that the age of any subnuclear particle doesn't
change, then you are correct. If you are saying that all subnuclear
particles are the same age, then you will need to substatiate that
claim.

> You still didn't explain to me how you can take a rock with a certain
>isotope ratio and determine the age.

I did very briefly in a previous post. If you want a detailed
explanation, pay attention in class next time, or go read a book on
the subject (a book written by a scientist, not a preacher).

> You can't know what the original ratio
>so you can't make an accurate age estimation. It doesn't matter if you are
>using Uranium/Lead or Potassium/Argon dating, there is no way to know the
>original ratios.

Again, I have explained this very briefly before, but it is obvious
you didn't or coudn't understand what I wrote. So let's take this from
your angle: Show me how it is impossible to determine the age of a
rock? Where is this 'unpublished' information you keep talking about?
Why are all these scientists wrong and you are right? Why does this
science work? If there is no such thing as natural seperation of the
elements, then how does gold appear in the streams? How does radon
appear from solid rock? How does coal and graphite form?

You really need to study the subject quite a bit more before you attempt to rewrite science.

The earth has a dynamic chemistry. It can be observed, measured, and
even predicted. Have you ever seen pictures of the salt flats? Coal
beds? Sulfer deposits? Diamonds? All these are products of mineral
seperation as done by natural processes. And despite what you have
been led to believe, these processes can be understood.

Sparky, you are about to enter a semantic wilderness -- bring a flashlite and a real good BS detector.

When we went around about this, me and Prof, we got hung up on just what Class C was and truth be known I was as guilty as he. The 70% efficiency claimed for 'Class C' operation implies an operating angle of about 120 degrees and SELF-BIASING via, in vacuum state devices, a grid leak resistor. This rather badly or goodly squares up the output which is pumped into a fairly hi-Q tank for sorting out. The process has all the subtlety (and linearity) of whacking an eight-foot Chinese gong with a sledgehammer. Varying bias with signal is not the path to fidelity.

But this is not what he is doing. But he is not getting 70 % either as you note.

You may not be old enough to have been thru it but here is the analogy. Back in the 50s the jolly folk from Mopar realized that they could not stretch their body design any further and compete with Ford and Chevy's 55 and later designs. So the designs from future years were accelerated resulting in having to fit old engines into new bodies until the newer engines became available. Their 'Suddenly it's 1960' ad campaign was for them quite real; what had been planned for 1960 came out in 1957. Unfortunately, this left no room for standard coil springs in the front-end so the springs were unwound and turned into torsion bars. The advertising department was then called up to sell this lash-up as something new, new, new.

What we have here is the Muntz of amps. If you don't put the parts in they can't go bad. Now he may be doing a better job of matching and single-ended design sure as hell makes this easier than some multiple-of-8 abortion but it is still a Muntz. You aren't dealing with Engineering, you are talking with the advertising department.

Does any one know if there are any sites that have live CB's online. Now you that scanners online were interesting. I think this might even be better.

I Don't know, Hearing a live cb radio from across country online seems quite interesting

Please reply to the author on this one.

You are right, that's not what he is doing. His definition of Class C
is 'anything less than 180 degrees', and then tries to sell the idea
that it is so much more efficient than the norm. The reality is that
the efficiency increase is marginal at best, and result in an amp that
is unusable for everything except a specialized transmitter.

Digging through the yards for truck parts I have noticed that the
torsion bars still work -- but those mopar leaf springs go limp way
too easily. Regardless, torsion bars worked -- this amp doesn't. At
least not the way he claims it does.

>What we have here is the Muntz of amps. If you don't put the parts in they

Supposedly Lee Iacoca had to almost be physically restrained by his lawyers from opening one of his Kcar ads with "we built some real crap in those days" over a picture of I believe a 58.

The nadir (or Nader) was 1958. You could watch your Mopar rust in the driveway, Ford went thru some stupid number of trannies - none of which worked, but GM stole the kishka. Not only could you buy a Buick Roadmaster 75 Limited with more chrome than you can imagine as well as a Continental kit, you could get a Chevy with a rear suspension that defies description equipped with air suspension, triple-turbine Dynaflow, and the infamous 348 engine. You too could cruise down Rodeo Drive and be outrun and outmilaged by a 51 Ford panel truck. In that context, torsion bars were minor.

Torsion bars are nothing but unwound springs and act accordingly. But the track was as wide as it could be to get the engine in and to make the torsion bar sockets work things had to be pretty well-made to assemble at all. In total it ran pretty decent or as well as a Hotchkiss with crummy rear leafs (you got that right) was about to.

It is almost tragic to see guys my age get the car of their dreams only to find it is/was a piece of crap. The 57 Chevy is a case in point.

Even Joe Isuzu could not find a lot to say about them -- or Brian's amp for that matter.

Dick

Apparently the writer can dish out sarcasim, but doesn't recognize it when it is returned. See below:

>I said in the last post I had no radio station Sarcasim you know.
>

Yeah, I know.

-QRM-

Closed circuit to MD#1/yahoo. You referred to my use of AOL in a disrespectful manner. I explained that AOL has advantages, and that I have other ISP's. You mistook that for interest on my part about your LAN system.

The point was: If you won't believe what I write in this NG simply on the basis of my AOL account, then I will be happy to correspond with you over the various broadband connections that I have. However, after reading your rantings and noting your obvious lack of reading and debate skills, I've concluded that it's not worth the time or trouble. It appears that everything you write--including insults--is simply for the purpose of letting YOU talk.

Author, speaking to lady at a party:
"But enough about me. What did YOU think of
my last book?"

3608. Dayton Ham Fest was a blast!

Newsgroup: rec.radio.cb
Date: 2001-05-30 12:34:26 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3B14E8D2.59B09577@qnet.com>
Source record: 83949

Hello All: Dayton was a blast, good people to meet, and a lot to see.

I was able to talk with the all manufactures I wanted to, and learned a bunch of things. Bought a bitchen set of remote tuning Capacitor and Inductor for only 100 dollars. And a 1000 foot of heavy silver plated braid wire, which had to be UPS'ed home. Not to leave out a ton of neat small items I bought.

Dayton was like the TRW swap meet only about ten times larger, with all the vendor or manufactures available to answer questions, and take orders, with the stuff being delivered before you got home. My hallway here at the house is loaded with crap I didn't need to buy, but wanted. I will be selling hub caps for food in the next few weeks.

Meet some really great people, but mostly technical talk was done at a local bar, with some pretty great looking waitress honeys. With communications mostly done on 2 meters cross banding to 440 from a motor home to Hotel bar room for tactical comm, for manufactures to be available for key customers. I never knew how much commercial interests there where! And all the wheeling and dealing.

The price of admission was a little step, I think it was 22 dollars. But I got some sort of discount from a vendor, I think, only a few dollars off.

Anyway a good time was had by all, especially me.

Well worth the trip, and price of admission. I had some e-mail saying it was a over priced affair, yes but prices could ne negotiated, but things are what you make of it.

Even meet a guy who posts here simi regularly, and his family. Had a very impressive motor home, with a well stocked up and running on-line bar. Some didn't show, but most did. The guy with the beam antenna hat was priceless, and he even shared with his bottle of VO.

I'll be going back next year, maybe we can get a rec.radio.cb group together?

Jay in the Great Mojave Desert.

Yes the chemistry is dynamic, that was one of my points. There is no way to pick up a rock, examine the chemistry or radiology and tell the length of time it has been solid. But, since you say that the chemistry is dynamic (it is) how can you tell the age of the rock by the chemistry of the earth if the chemistry of the rock changes with time due to radioactive decay? I can build my own rock that would look billions of years old by radiometric dating. So I guess my to-the-point question to you is -- since the earth's chemistry is dynamic, continually changing, how can you tell what the original chemistry of a rock is if you don't know the "chemistry of the earth" at the time? Yes uranium gradually decays to lead through many stages. Lead also has an affinity for uranium just as iridium has an affinity for iron. That is rarely considered when dating rocks containing lead and uranium.

You must have missed the goat with the ATV setup on it's back, with a small solar panel, in the fleamarket. Did you check out the red pickup with the crap load of antennas on top in the fleamarket area too? This guy must have had more bands, radios, amplifiers running mobile than most do for a fixed base station.

To call these amp class c is a long stretch at best. Class c is generally biased well beyond cutoff and you cannot get a linear output from a true class c amp. This is just more hype for the cb crowd.

Source record: 83955

Galaxy 959 CB Radio: AM/SSB includes Dual Finals(2316s) upgrade with heat sink in back and Viagra 40+ and 40- Channels. (uses the hi-mid-lo tone control switch) It is peaked and tuned. AF componets were replaced with higher power/cooler running components. This improved sound quality, stability and the radio runs cooler. Also Schottky barrier diodes were added to improve AM detection, low noise on receive and Noise Blanker Improvement.

It was a pretty good radio out of the box but could not resist the oportunity to make it better.

Radio is about 6 months old purchased from Panther-Electronics. Includes original mic, mounting bracket, manual and box. Great sounding radio with all the features.

It has never been mobile and was used only as a fix station.

Sorry i missed it :/ Had some things to do here, I was schedualed to teach
some First Aid/CPR classes over the weekend, and had the "duty" with the local EMA. These next few weeks are going to be busy as well, have to be in Columbus by 8:30 am to meet with the company that is manufacturing our new
mobile kitchen for disaster relief. Then come back and make repairs on our mobile communications trailer, it was damaged over the weekend by the high winds, it ripped our new canopy right off the trailer. Then this weekend I teach some more classes then next week I am driving the ERV to the Ohio Training Institute and while I am there I will be taking a week of classes myself.

On another subject, I was going through a pile of radios I bought in a "lot" at a garage sale, picked up alot of old and new radios, 3 johnson messengers, one johnson viking messenger, some other old tube radios, and one mobile I picked up was new, clean as all get out looked like it had never even been used. It is called a Mongoose 450, has a gold face, all the knobs and push buttons are backlit looks kinda cool at night. I have never heard of that brand or model, it doesn't look like a ripoff of any other brands (cobra , uniden) it works good sounds nice and crisp w/o any distortion. Think I might use it for my vehicle.

There were a few items here and there as always. But it was nothing like last year where some vendor was selling H.F. amplifier kits, in the big tent area at the far corner of the fleamarket, and some CB radio shops selling "export radios" elsewhere. I heard the Detroit FCC office boys paid them a "visit" last year and I didn't see them, the vendor, this year anywhere. Of course that may have been the result of the fact that Mr. R.H. was going to be at the Hamvention himself. I think the word was out and most of the illegal CB junk was not displayed or sold this time around.

Take a diamond, for example. Pure carbon. It's crystalline structure
is unique to all other crystals. We know the half-life of carbon-14,
and we also know what it decays into. The diamond can be tested for
both the quantity of decay product and for the quantity of carbon-14,
the total of which will determine the amount of carbon-14 that was
present when the diamond was formed.

Any more questions? Why don't you answer a few of mine?

BTW, carbon-14 is a beta-emitter, which therefore decays into
nitrogen-14, which is stable. Nitrogen would not be present in the
formation of a diamond, but as a decay product it would be found
locked up inside the crystal.

Hello Capn, Helmut, Lennie, Prozac ahh
who ever you are today.

E-mail me direct and I'll be happy to
tell you. Otherwise.....

The Landshark

PS, why are you so concerned Prozac? Just
wondering.

Cobra 148 GTL and then
get a good radio like a Cobra 2000 GTL so i can get out

.. They are the same radio, inside the boards, etc.... Only the covers and
power supplies and counter on the 2000 set them apart.

3631. WANTED: Barrett 550 HF radio software

Newsgroup: rec.radio.cb
Date: 2001-05-30 22:56:44 UTC
From: Darren Harwood <dih@netspace.net.au>
Message-ID: <9f3tv4$30l9$1@otis.netspace.net.au>
Source record: 83970

Would anyone have, or know where I can get a copy of the programming software for the Barrett 550 HF radio?

This software is to be used for programming the receiving side of the radio only, not for transmitting. I'd like to be able to upload favourite HF utility frequencies, as well as delete unwanted HF broadcasting stations from the memory, and it is a pain to have to drive down to the nearest dealer in order to get them to set it up every time. I'd also like to be able to remove the restrictions of using only 1 sideband per receive frequency on the shortwave broadcasting bands.

If anyone can help out, can you please e-mail me direct at dih@netspace.net.au

Thanks.

Nice contribution...real nice, sheesh!

>Does any one know if there are any sites that have live CB's online. Now

To answer your question, while I don't have a specific sit for you to visit...perform a search with 'cb' & 'firetalk' as your keywords. You should come up with a few site that provide exactly what you've described. Good luck.

Hello Leland: No I must have missed the goat, I didn't get thru all the ill ways, I admit. But did make most of them.

I was mostly intrested in the antenna manufactures, and towers. Glen Martin has a bitchen aluminum tower with a crank up or motorized plateform that raises and lowers, while the tower stays put. I am ah gettin one!

I bought a old General Radiotelephone linear amplifier, that was in a MC-11A type chassie, that used a single 4CX250B tube, and seperate power supply from a older guy. The amp was made by the employee's of General Radiotelephone, and was intended to be sold on the open market but never was. I have only heard of these amps, so its quit a collectors item. Maybe only a few made I would believe? Maybe Bob knows?

Out ot time again.....

A teacher asks her class, "If there are 5 birds sitting on a fence and
you shoot one of them, how many will be left?"
She calls on little Johnny. He replies, "None, they all fly away
with the first gun shot".
The teacher replies, "The correct answer is 4, but I like your thinking".
Then, little Johnny says "I have a question for YOU - there are three women
sitting on a bench having ice-cream: One is delicately licking the
sides of the ice-cream. The second is gobbling down from the top and sucking
the
cone. The third is biting off the top of the ice-cream.
Which one is married?" The teacher, blushing a great deal, replied "Well I
suppose the
one that's gobbled down the top and sucked the cone".
To which little Johnny replied, "The correct answer is the one with the
wedding ring on, but I like your thinking".

You will note several things about news2.mibx:

1) His postings are at roughly 0800Z and 2300Z which is about right for a 12-year old Brit using Mumsie's compooter.

2) They come in bursts which would be the mark of someone paying for access by the minute, common in Europe but unheard of here. Compose offline and blast away!

3) He is a week or two from being carted off to Bedlam.

Did you ever figure out who wrote all those TS/TV posts for all those years? On your computer? Using at least three of your email accounts? Did your wife ever look at those posts and compare them to the times you were out of town? When was your last AIDS / Hep-C test? I'm sure you know that both of those diseases may not show up in your system for years, and that you can transmit the disease without showing any signs. Don't you think you owe it to your wife and kid to get tested regularly?

Now Mudduck,
You are changing your screen name too, boy I'll
tell you people, not a one can stand up for their
own name when all the mud slinging happens.
Yes I did find out who did it, but it doesn't
matter to any of you, all you people care about is
to flame, so go ahead, flame away.
Yes I have, every year I get a physical
thank you. Think about this crap will you,
if I really did those post do you think I would
stay here and take all the flaming?

United Patriot Radio. He claims to be a clandestine, but since it's just him he's more of a pirate. He also uses 6900. Reportedly he'll stop using 3260 because of the summer lightning noise and focus on 6900. Said to be running 800w, to upgrade to 5kw in June.

This one won't. It's already been there and done that.
It's proven itself to be reliable even in heavy truck service.

> The Ranger AR-3500 is the top mobile rig.

The AR-3500 is an antique with very primative
early digital frequency control. The 2950 CPU
is light years ahead of the AR units. I've worked
on both and both were built to price points. The
ARs weren't anything special--they were just
overpriced--like much of the other ill-conceived
crap that came from that manufacturer in those
days.

Sorry, my diagram ended up looking like a Picasso. But I think he is
saying that some of the RF pirates in the newsgroup are old-time
hackers, and that we should watch out or they will crack the password
to your WordStar, 1-2-3, and d-Base. I don't have to worry cuz I'm
running a CoCo II using OS-9 (I recently upgraded from my IMSAI).

Hacking...phreaking...yeah, great. What do illegals turn to when they have
a problem? An illegal solution, natch.

PS> The Armada will be sailing for Tampa on Sunday.

Folks,

a friend of mine is looking for the following Racal gear to complete a VRM 4125A station:

VRM4125A Manual (there may be more than one - not sure)
MA 4178 Power Supply Unit
MA 4106 Voltage Regulator Unit
MA 4142 Initiate Tune Box
VRA 549B Auto Antenna Matching & Tuning Unit (AAMTU)

Anyone with any of these units to sell or swop, please get in touch.

I see the United Kingdom still has a "licensed" CB service. Does anyone know what the format of CB callsigns are? (ie: KABC 1234, but with UK prefixs, etc) Frequencies/Modes...?!?!

Please copy to my e mail address...

Thanks

73

Steve, K4YZ

Might I suggest only breaking it into small enough pieces that when shoved into sparky's ass they are still large enough to cause severe pain? In other words leave it whole!

Tell ya what: there is very little in life that compares to turning a
kid on to self-confidence. Some of them spend their whole lives
withour any control of their surroundings, and when they suddenly see
that they can manipulate a force that most consider to be "magic", you
can see their spirit light up like someone just lit a torch. It's
better than sex (are you listening, sharkie?), and that good feeling
stays with you a lot longer than going to church on Sunday.

BTW, two of them are going for their ticket next month. One of them
spent two years in juvenile detention, and he is going straight for
his general. YEAH!!!

Man, why don't you shut off your bullshit for a minute and be glad
that someone is finally making a difference for himself. Some people
don't get life handed to them with a gold card, and some of them have
to really work to make life work. I help some of them. If all you can
do is criticize, then fuck you, Train. I don't care what you say about
me, but don't EVEN cut down kids that are challenging problems that
are more severe than most of these people in this newsgroup will
(thankfully) never have to deal with. So unless you can say something
positive, fuck off.

Hey Train, check this out. Last fall a local CB shop thought they were dumping on me a bunch of junk radios. What did some of these kids do with them? They pieced several together and made them work. They didn't care that they weren't Yeasu's or 2950's. They were Cobra's, Royce's, Rat Shack's and a few other 'cheapies'. They built their own antennas, and with the help of some gel-cells from the local recycling yard and AC/DC converters from my favorite 2nd-hand store, they run those radios with pride. And you can't touch them in ingenuity or determination.

My cut is that I was able to help them along. Helping people is what it's all about. But you can't help anyone that won't help himself. These kids -want- to help themselves -- they -want- to do something besides shoot up and burglarize cars and homes for a living. So give them the credit they deserve and shut the fuck up.

So how can you be sure that the production of Carbon-14 is constant over the past thousands of years. Besides, Carbon-14 has a half life of only a few thousand years. If diamonds are billions of years old as some claim then diamonds should have almost no Carbon-14 in them.

next example....

I suppose the Yanks DID rewrite history in a way.... Movies aside....

What if... the Yanks had stayed out of the war in Europe? ...What if.. the Yanks had refused to 'lend-lease' England planes, tanks, ships, food, oil, & war material? What if only Montgomery had landed at Omaha Beach??... (Can you say "Dunkirk #2"?)

What if... after Pearl, we had licked our wounds and decided NOT to wage war in the South Pacific against the Japanese? (the countries threatened were mostly Britain's sphere of influence)

That was history being rewritten for sure....

Might be the fella from the Michigan Wolverine Militia... he was in the Detroit paper the other day (can't remember which one). He runs a SW radio station out of MI (from a mobile home up north).... location was given in the article.

There's also been another Militia-type from Kentucky on the same freqs... 3260 & 6900kc.

Wonder if they're still sellin' Y2K MRE's to all the suckers?

LOL I actually kinda wonder about that now that you think about it..
especially after seeing whats going on in here and the people on the radio
in my area that depend on running a shitload of power like they depend on
testosterone. But its kept me out of trouble for the most part. When I
first got into it, I thought it was pretty damn cool to piss off the guys on
the radio. At the time it was fun to me cuz I got them out in their cars
trying to find me. It was funny....But yeah...I do think it was a good
choice

Cobra 29LTD ST $60. In great condition. Base and mobile antennas, Cobra power mic, and 120/12v power supply available too.

Features:
40 CB Channels
Full RF Power Output
SWR Calibration
Front Microphone Connector: Allows convenient installation to be in dash or under dash.
4 Watts AM RF Power Output: The maximum allowed by law.
Tactile Controls: Allows you to actually feel where the dial is in it's rotation without taking your eyes off the road.
Delta Tune: Used to clarify incoming signals.
Instant Channel 9: Instant access to emergency channel 9 .
Adjustable Dynamike Boost: Dynamically boosts microphone for increased voice clarity.
PA Capability: Use CB radio as a Public Address System with PA speaker. Receive signals can also be monitored through PA.
Dimmer Control: Adjusts brightness of the channel display and signal strength meter.
Switchable NB/ANL: For increased noise reduction.
RF Gain: Adjusts receive gain in weak and strong signal areas.
.

Located in north-ish Seattle.

I used to think that way myself. Some people have the knowledge and
fortitude to make informed and responsible decisions about their
lives. Some do not. All people might be created equal, but they sure
don't all get decent parents. Some kids learn life's lessons earlier
than others, and a few never get the chance to learn that life can be
so much different than what they grew up to believe.

A new kid showed up a couple months ago. Soon afterwards, things
started disappearing. Of course, everyone thought she was stealing,
which was true. We confronted her, she admitted it, and she left
without incident. We found out a week later that her mother (single
parent) has been doing check fraud and perscription fraud for years,
and the girl had recently been 'beaten in' with a gang. On their own,
and with a new understanding, these kids brought her back into the
center. Nothing else has disappeared.

Corny things like that happen all the time at that place. It's almost
routine. I don't help these kids nearly as much as they help
themselves. All they need is someone to show them how to be a little
bit more understanding, considerate, and compassionate for others.
They set their own examples.

Life isn't a competition, and it wasn't my intention to belittle your own hardships. If you think that everyone should suffer because you did, then your hardships are not over.

Hello Twistedhed:

We do enjoy your writings now and again and the way you place one word in front of another. Occasionally they do make sense, the way a hundred monkeys would if you gave them a hundred typewwriters and let them bang away on the keys. Heck we are even amused especially when there is a zinger or two that finds its mark. A word of advice from one of the great unwashed though- the less you say, the better off we all are.

>thousand years. If diamonds are billions of years old as some claim then
>diamonds should have almost no Carbon-14 in them.

The half-life of Carbon-14 is 5730 years. 'Half-life' means that after
5730 years, half of the quantity will have decayed. So if you start
with 10 million atoms (not an unrealistic number), after 5730 years
you will have 5 million left. After another 5730 years you will have
2.5 million left. Let's see just how good your math is: How many years
until there is just 10,000 atoms left? And yes, 10,000 atoms is a
measurable quantity, not only with a gas chromatograph, but also by
measuring the rate of decay.

You have basically said that by using Carbon-14, you can only date
things for a few hundred thousand years, and you are correct. The
oldest rocks on earth are only about 3 billion years old. Some
diamonds are millions of years old. Carbon-14 dating doesn't work too
well with rocks that old. But diamonds have been artificially produced
for about a century, so the method of Carbon-14 dating can be easily
verified.

Now, take a look at Gadolinium-152. It comprises 0.2% of the naturally
occuring isotopes of Gd. It's half-life is 110 trillion years. What do
you think the dating limit is for that?

Quoted directly from THAT page:

"Series CHC amplifiers operate in the non-linear Class C mode. This allows for maximum efficiency (AC to RF) for transmission of both frequency and phase-modulated carriers. "

I see no mention of amplitude modulation. <;

Message-ID: <3B16CEA3.DEC90B48@home.com>
Source record: 84020

Not much disagreement from me on Richard's answer. Most RACES organizations have practiced for certain types of emergencies dependant upon the region of the country and the anticipated emergencies. California would be ready for earthquakes, the northeast might be ready for icestorms, and here in Texas, the main topic is the next tornado. Who planned on a mountain exploding? About half of all licensed hams today are technicians who aren't allowed into HF and don't have the equipment anyway, so when something like Mt. St. Helens happens in mountainous territory and a large geographic area, well, 2 meter and 70 cm rigs weren't up to the task, and there weren't enough RACES members with HF equipment to do the job.

3732. ~~FS:Yaesu FT101 Package-11meters~~

Newsgroup: rec.radio.cb
Date: 2001-05-31 23:09:40 UTC
From: jimmoci@aol.com
Message-ID: <20010531190940.14690.00002243@ng-cm1.aol.com>
Source record: 84021

For Sale- Yaesu 101EE with AM filter, YC601 Freq Counter, Speaker/Phone Patch, FV101B external VFO. Unit covers 26.5mhz-28mhz. The unit works well- it was just repaired 6 months ago and fully aligned. The face of the 101 has some wear marks on the painted lettering, the Speaker Patch is in good shape, the counter has a few scratches, and the VFO has a blemish on the model# tag. This radio works great on all bands and the output tubes are at full. It's not the prettiest 101EE- it does have a few nicks and scratches but it works very good. $475. I may split it up at a later date- but not yet. I know everyone wants the counter and VFO- but dont make me any offers unless it is the full package. If I decide to split it up I will repost at a later date. Check pic out at http://members.aol.com/~jimmoci/ft101.jpg
Thanks!
Jim

Yep, that will get you Class-C alright. It will also put you on your
neighbors TV using anything other than FM, CW, or -REALLY- LOW
modulation.

El Snipo applied liberally but conservatively.

You make a few good points:
1. Kids when the age approaches double digits begin to raise each other.
2. Often the best contribution you can make is to be an example of a
functioning (if not always functional) adult male.
3. The excuse for the interaction is not particularly important. CB is as
good as any.

My particular schtick was middle-school football. One kid I will always remember was a big strong moose with the apparent IQ of a box of rocks. I had to go get him to bring him to practice several times and read out a few of the team leaders who wondered why I was spending the time on a 'dirtbag'; on my teams, the word 'teammate' is operative and nothing else is important. We got thru the season and life moved on.

Next season, one of the other coaches asked me how it had gone with Fauntleroy (hope no one thinks that was his real name) as he had a professional interest. I said OK, he made a pretty good center and D-end, and asked what the professional interest was. He replied that he was a cop and had not seen him lately. Fauntleroy is the starting center on the hi school team these days. When I met his mother, all things were explained.

Did I cause a drastic improvement? No way. But what I did do was give a kid a square deal, teach the whole squad the difference between a team and a tribe, and let things take their course. The game does the teaching and preaching but all of that becomes a bit unimportant when the only thing standing between your backfield and Man-Mountain McGurk is this dirtbag. Don't shoot Mongo, it just makes him mad.

I could have preached 'diversity' and made all the analogies to orchestras, there ain't no I in team and all the rest of the bullshit. A good opposing nose-moose tells the story better than I ever could.

Somewhere between 'take em out and have em shot' and 'they are not responsible, they are kids' lies reality. In a lot of cases, a simple(?) adult example is all it takes. Being that example requires either extreme arrogance or stupidity or a bit of confidence in one's own status as a functioning adult. Give yourself a gold star for me Sparky.

Dick NBK

3736. Ya'll are great.

The yeller feller regurgitated: - the less you say, the better off we all are.

"But of course you are. No one else has been more responsible for making you cry, whine, plead, beg, bawl, imitate, hide, lie, accuse, get pissed, shake, threaten, slobber, drool, forge, clamor, whimper, snivel, sob, stutter repeatedly, stay up all night, soil yourself, and make an ass out of you more than me, which is why you are in hiding in the first place. Otherwise, you would have no problem remaining on topic instead of attacking those who challenged your lack of electronic intellect for all the world to laugh at. CB or no cb, I would be embarrassed to admit to me who you were also, IF I were you. Stick too what you know..uh, you did say you knew something related to cb, didn't you? You think you can do that without embarrassing yourself further through your feeble attempts at belittling others?"

i WANNA HERE N8 OUT THERE IN DX YELLIN OUT "WORLDWIDE, WORLDWIDE, WORLDWIDE N8 WORKIN THIS KRACO GOT DOWN!!!!!".....LMFAO!!!!!!!!!!!!!!!

Them boys in Phoenix were doing it using N8's call AND a certain Kansas City call a month or so ago on a Saturday morning. I'll be more than happy to forward your request to the impenetrable and untouchable Betabossanova Network. You never know what may take place on Saturday mornings.
